

Endoscopic findings of gastric cancer

Jun Haeng Lee. Sungkyunkwan University

Endoscopy for gastric cancer

- Starting endoscopy with **BOXIM** and **DEX**
- AGC Borrmann type 4
- EGC at blind area
- Interpretation of biopsy result – atypia

Traditional

Brief observation

Insertion

Current or Future

BOXIM (box simulator training)

Lectures and book-reading

DEX (description exercise)

Clinical observation

Insertion under supervision

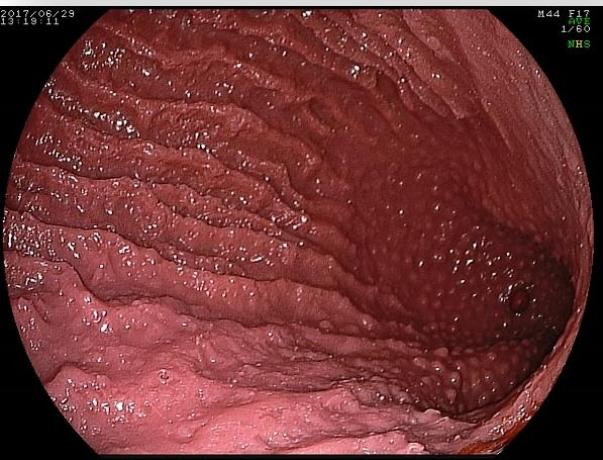

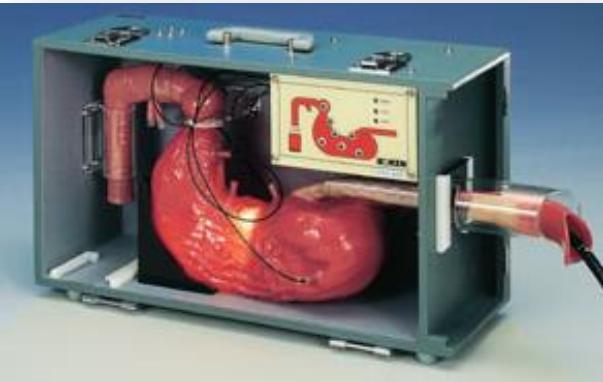

CEE (off-line & on-line)

What kind of simulator?

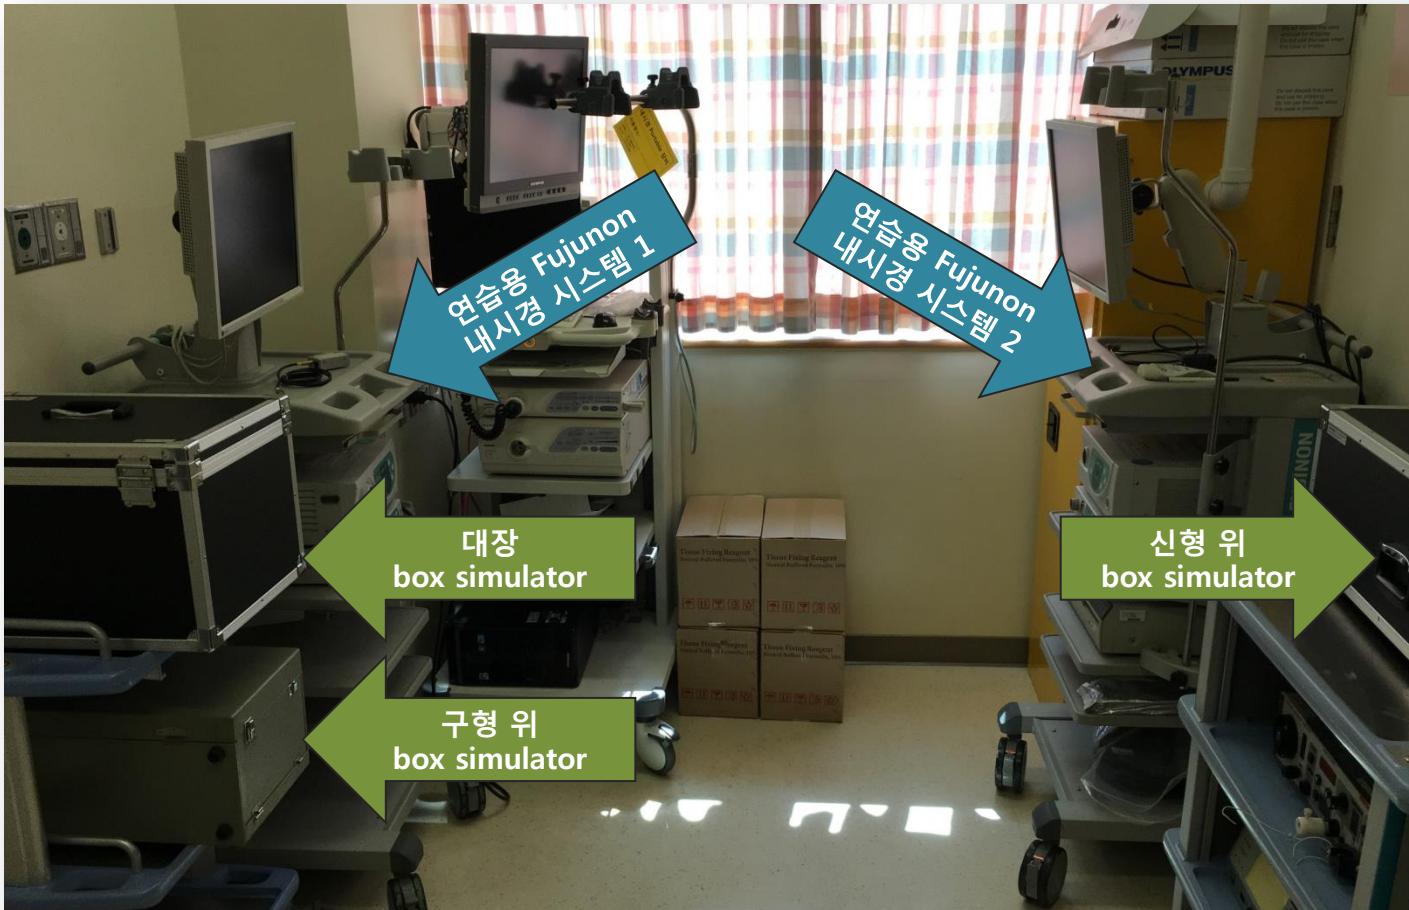

Old vs current model

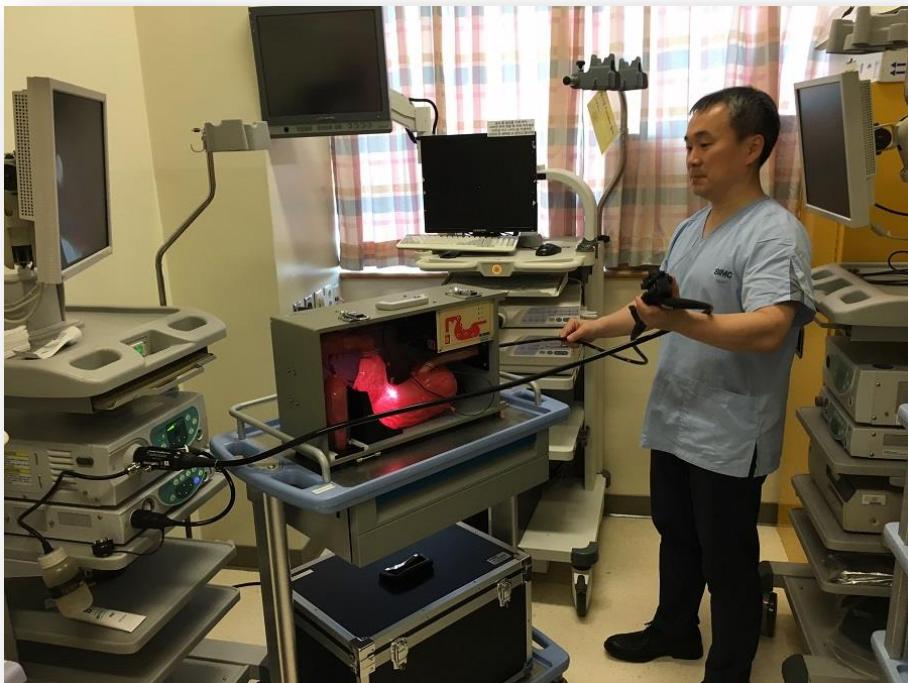

BOXIM in the evening?

BOXIM training room

Daytime BOXIM training

Endoscopic findings for gastric cancer

성균관대학교 의과대학 내과 이준행

What is important?

Borrmann type IV AGC?

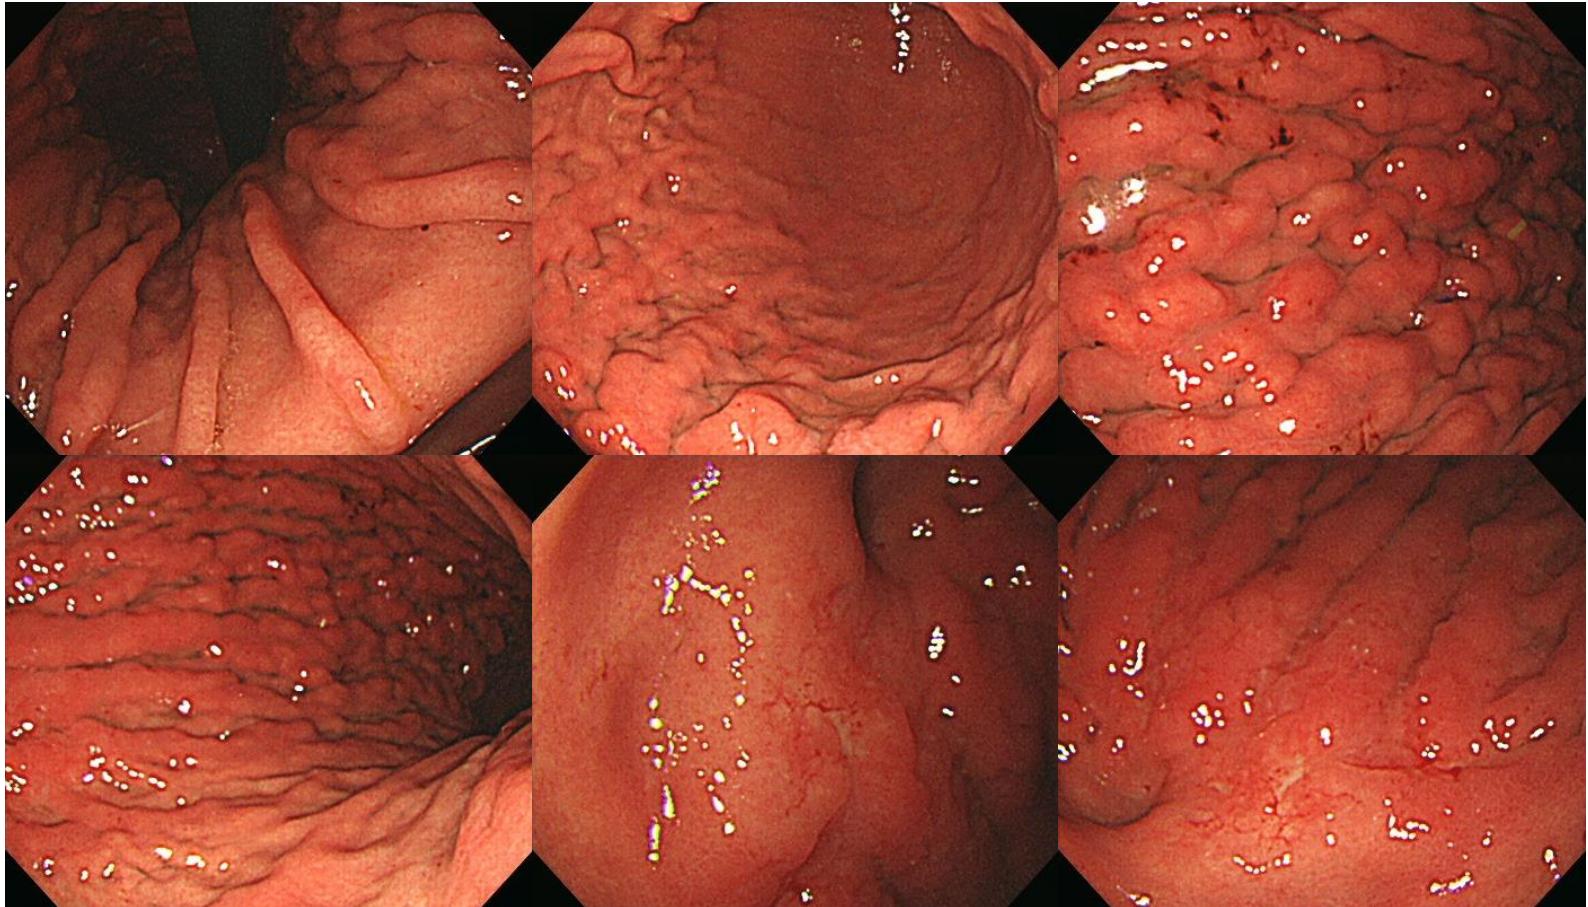

Other AGCs?

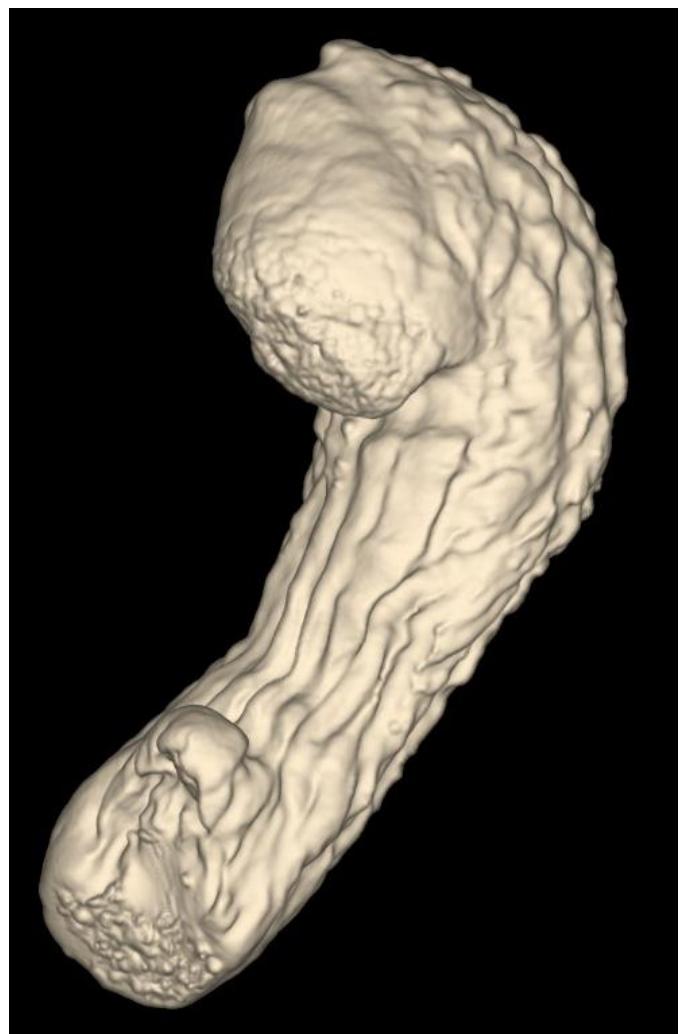

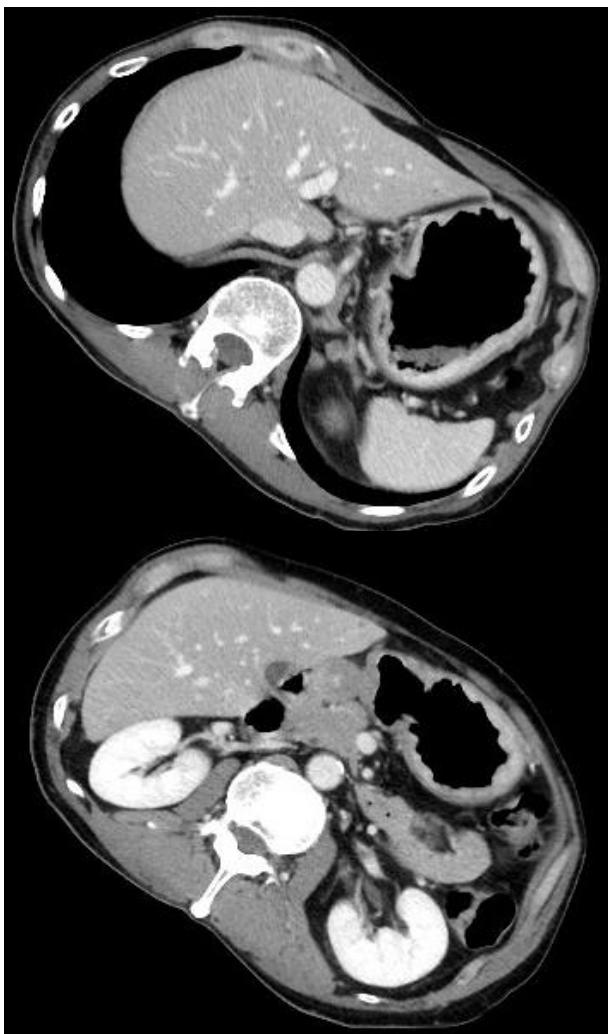

EGC?

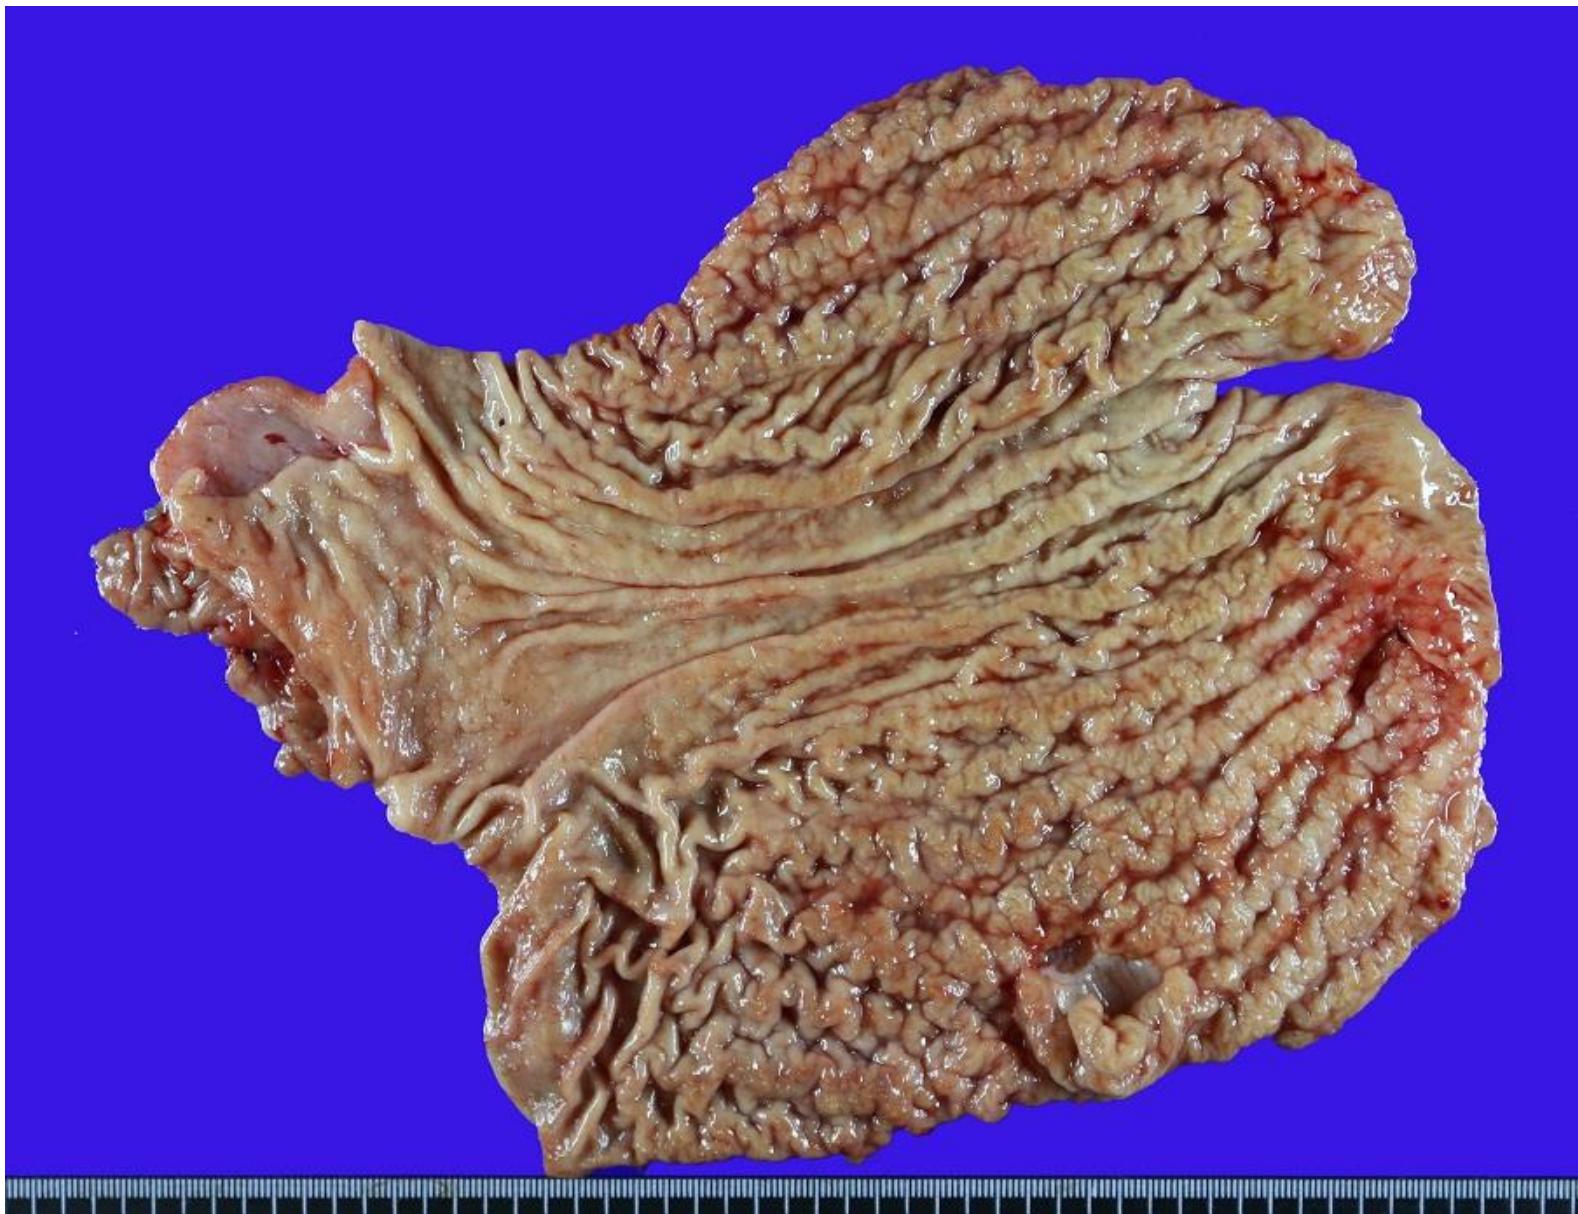

Case 1. AGC B-4

성균관대학교 의과대학 내과 이준행

AGC B-4 (F/55, 2013)

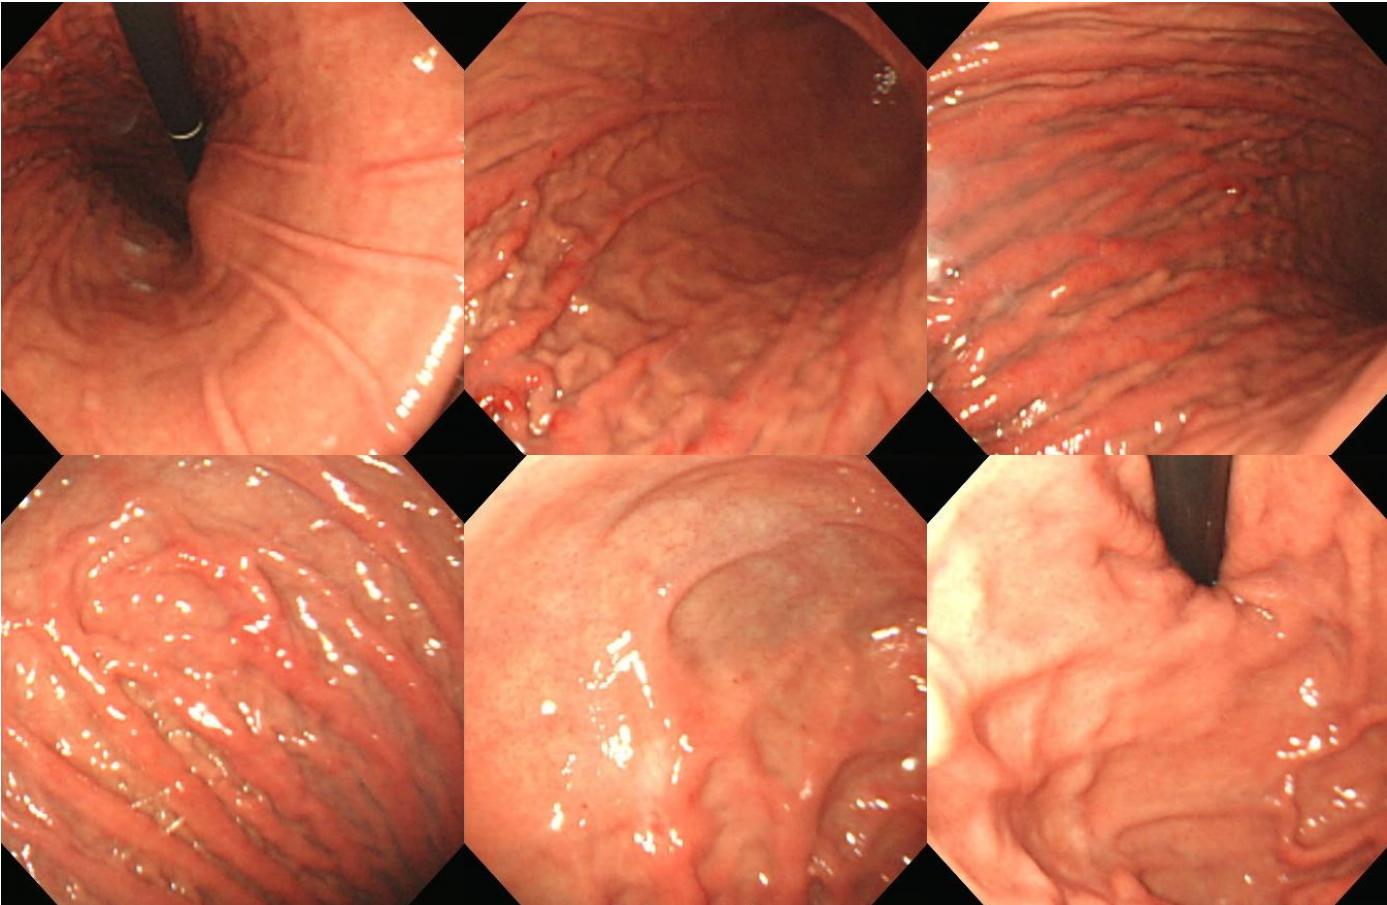

Stomach, total gastrectomy:

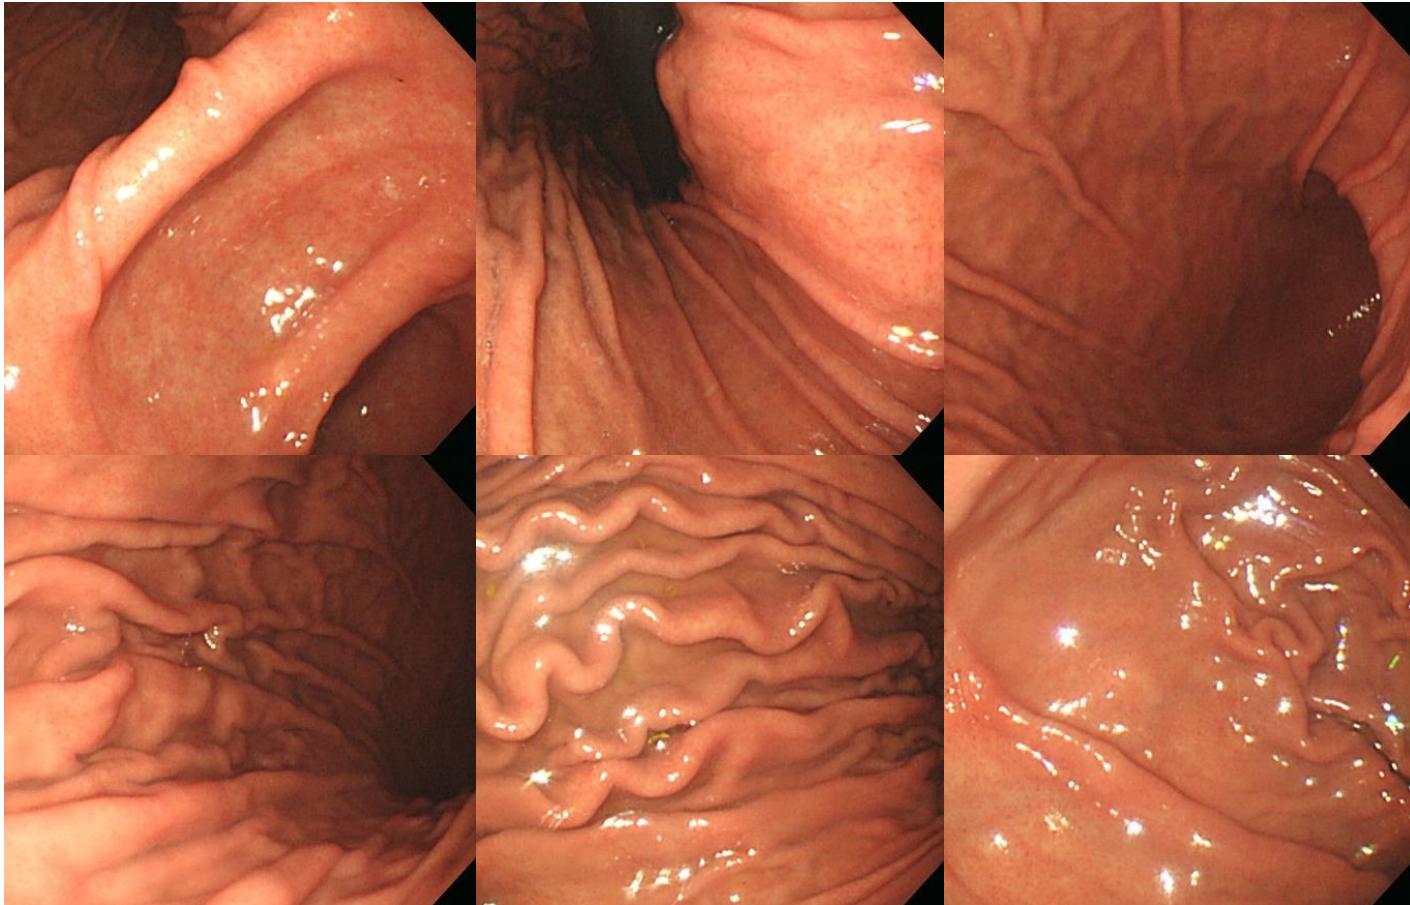

Advanced gastric carcinoma

1. Location : upper third, middle third, lower third, Center at fundus, body, and greater curvature
2. Gross type : Borrmann type IV
3. Histologic type : tubular adenocarcinoma, poorly (poorly cohesive) differentiated
4. Histologic type by Lauren : diffuse
5. Size : **20x18 cm**
6. Depth of invasion : **invades serosa (pT4a)**
7. Resection margin: free from carcinoma
8. Lymph node metastasis : **no metastasis in 31 regional lymph nodes (pN0)**
9. Lymphatic invasion : not identified
10. Venous invasion : not identified
11. Perineural invasion : present
12. Peritoneal cytology : negative
13. AJCC stage by 7th edition: T4a N0

1 year ago

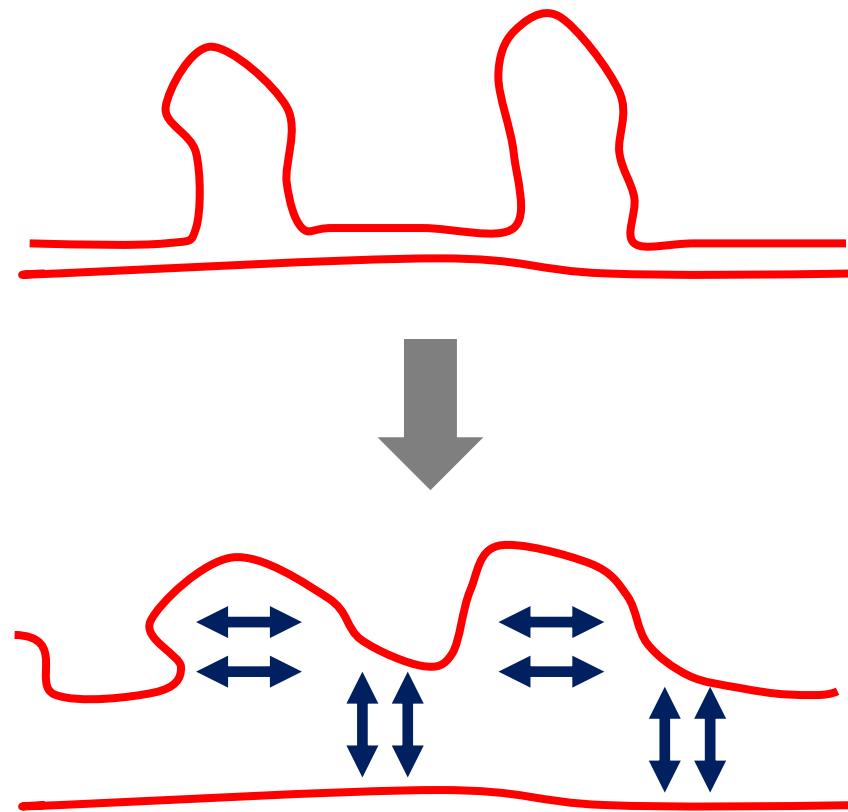

2 years ago

How can we make a diagnosis earlier?

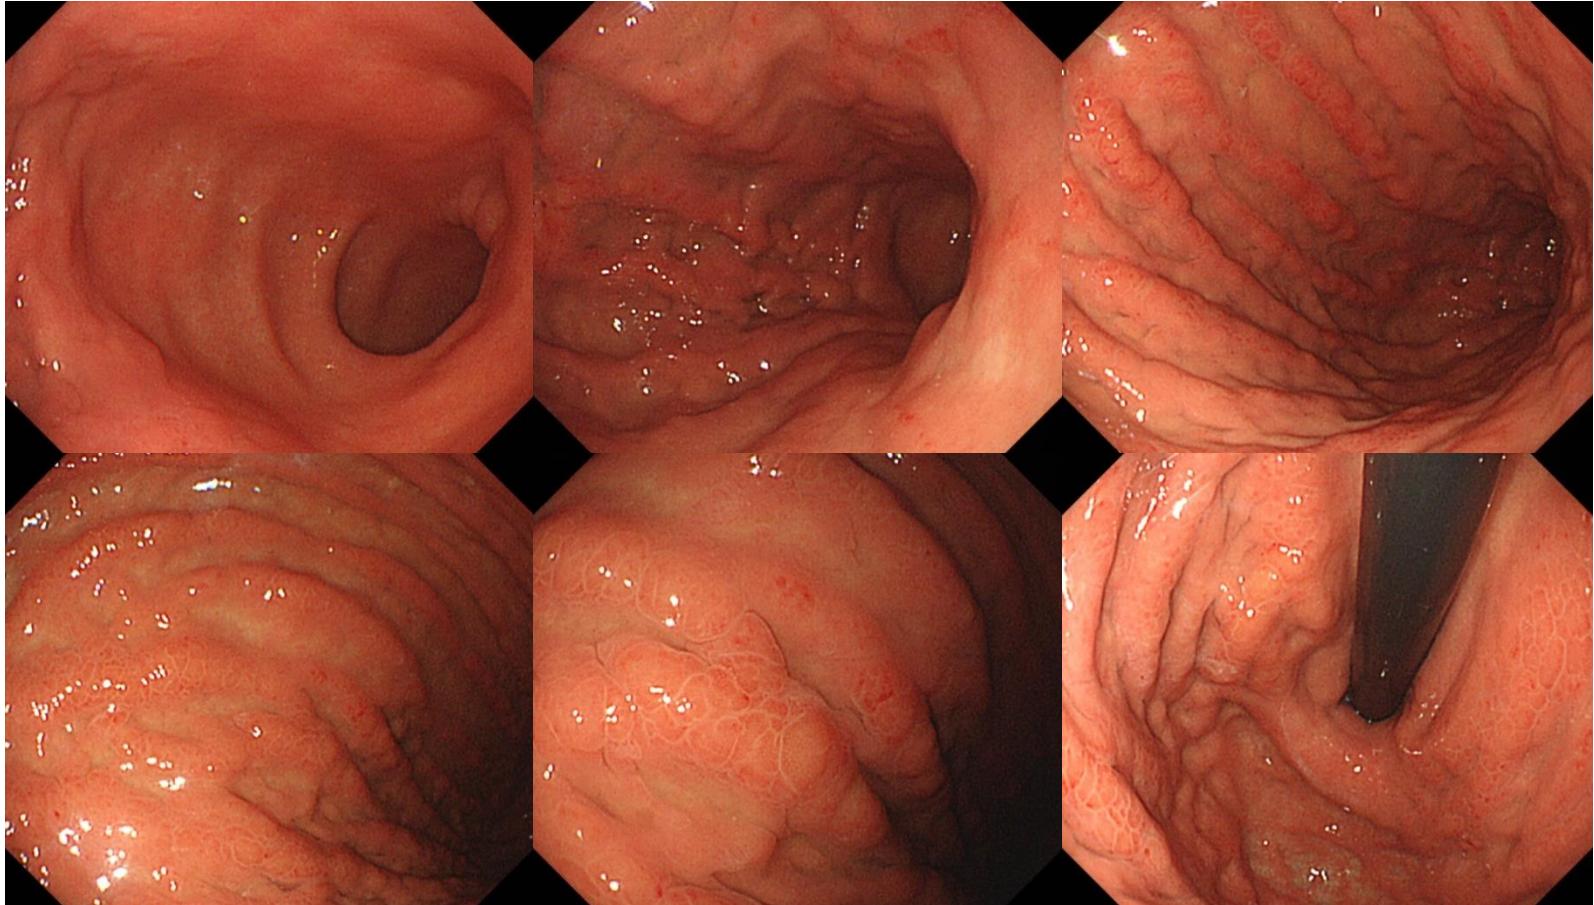

Gastric folds and wall thickening

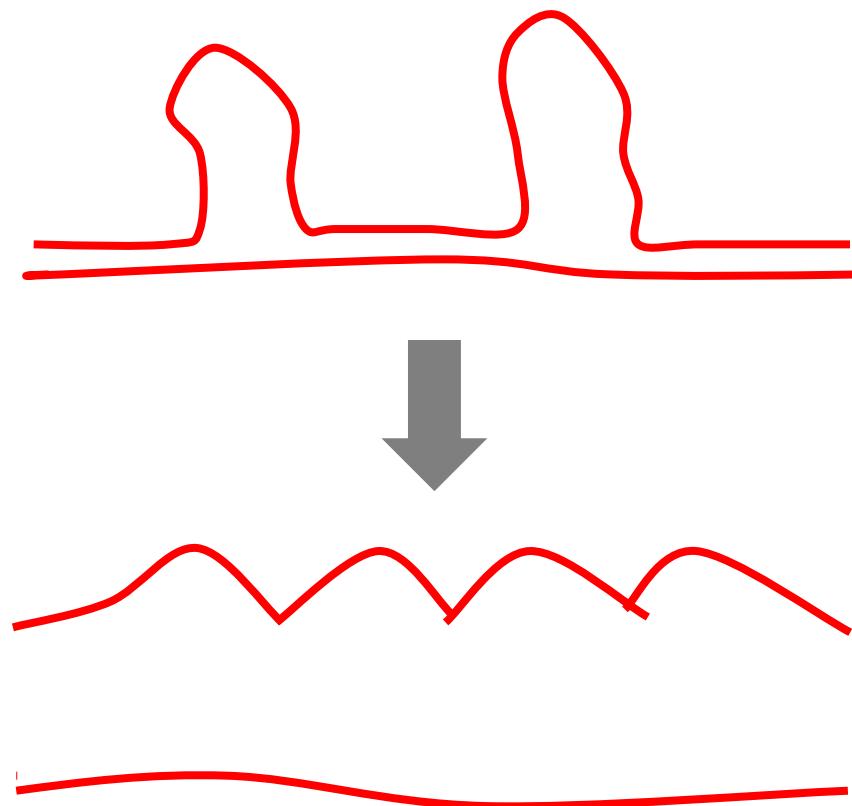

Fold thickening

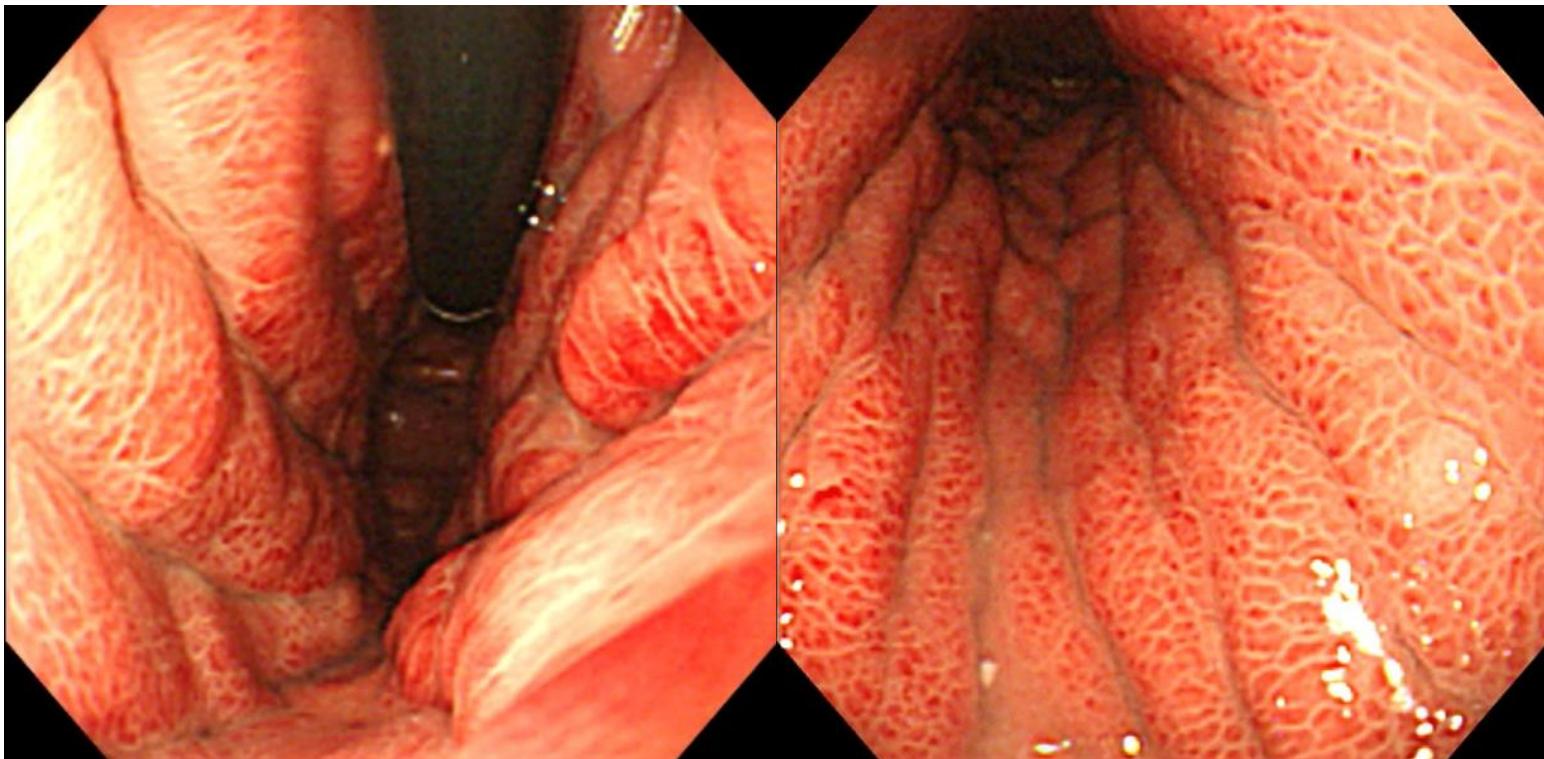

- Initially peritoneal seeding (+)

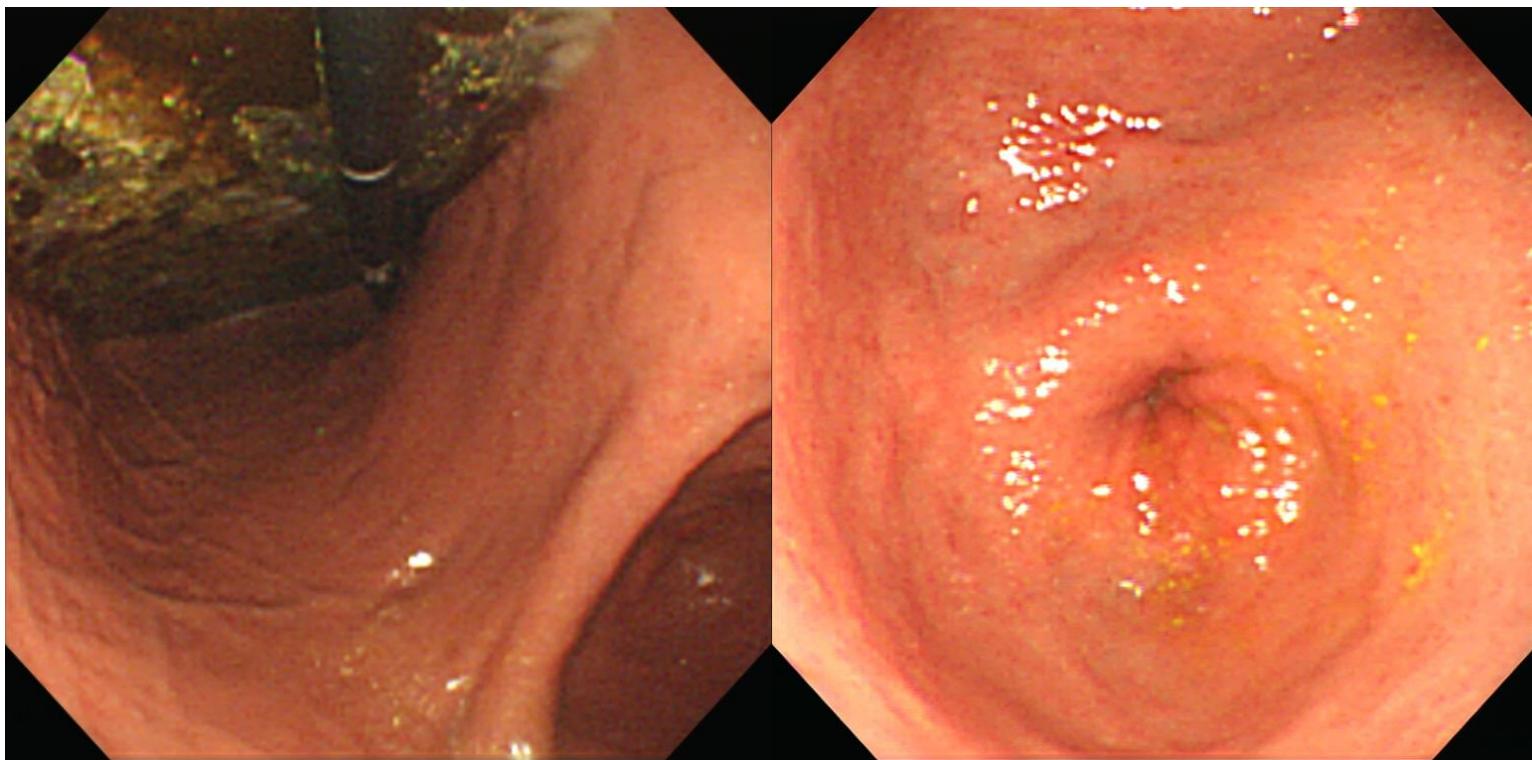

Shoulder by shoulder

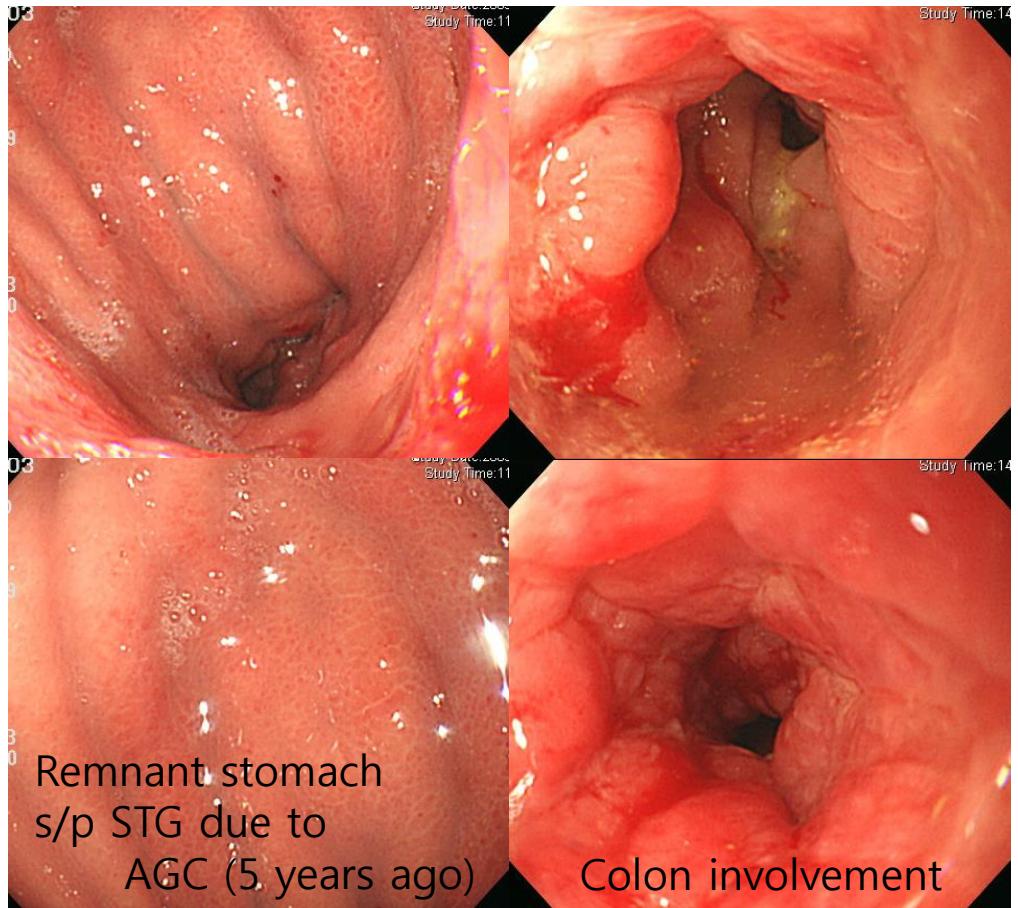

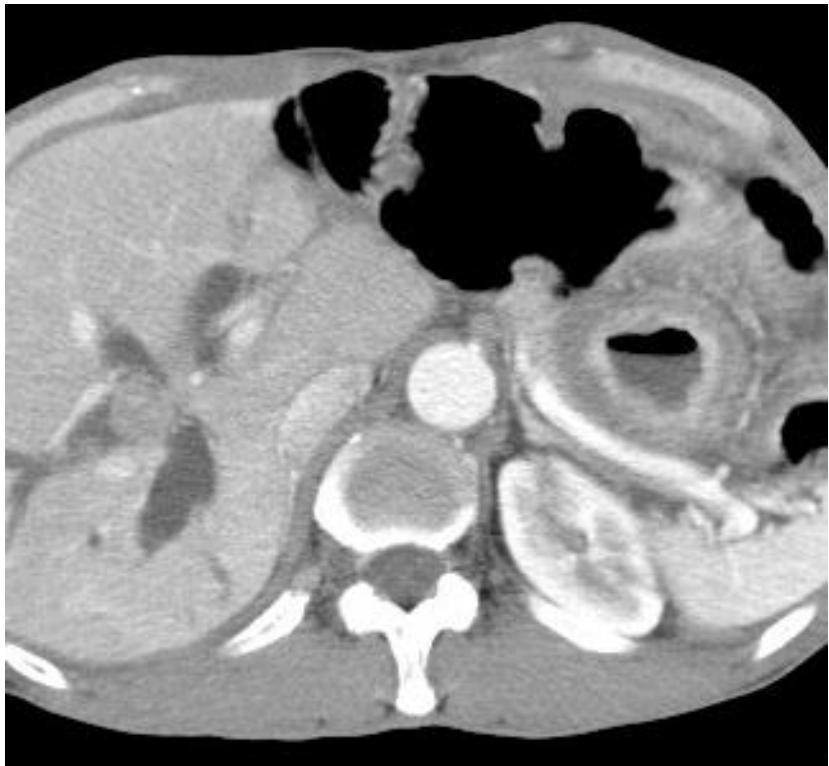

Shoulder by shoulder Limited expansion by air

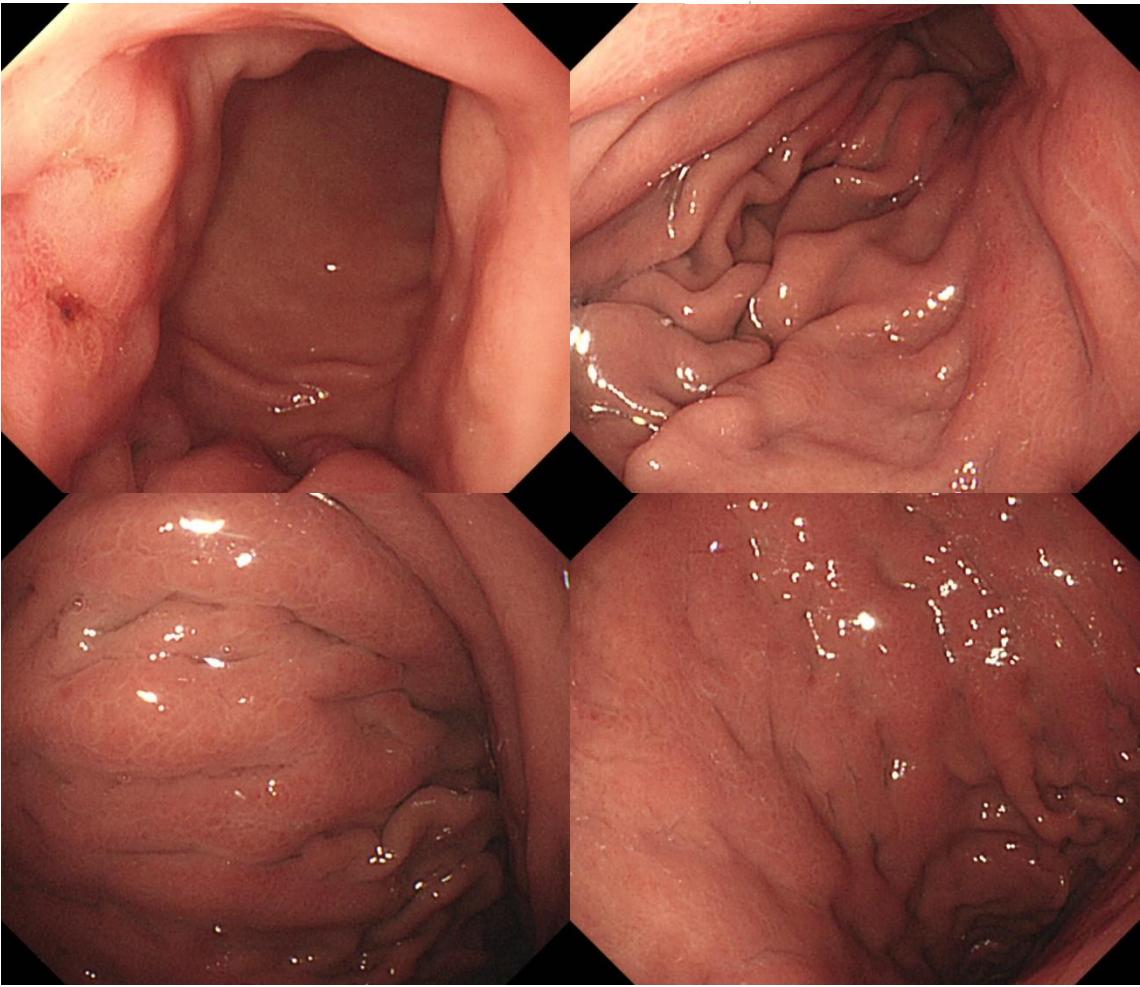

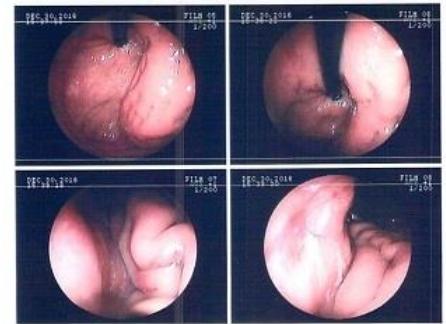

Antral type

AGC B-4 of the remnant stomach

Biopsy negative AGC B-4

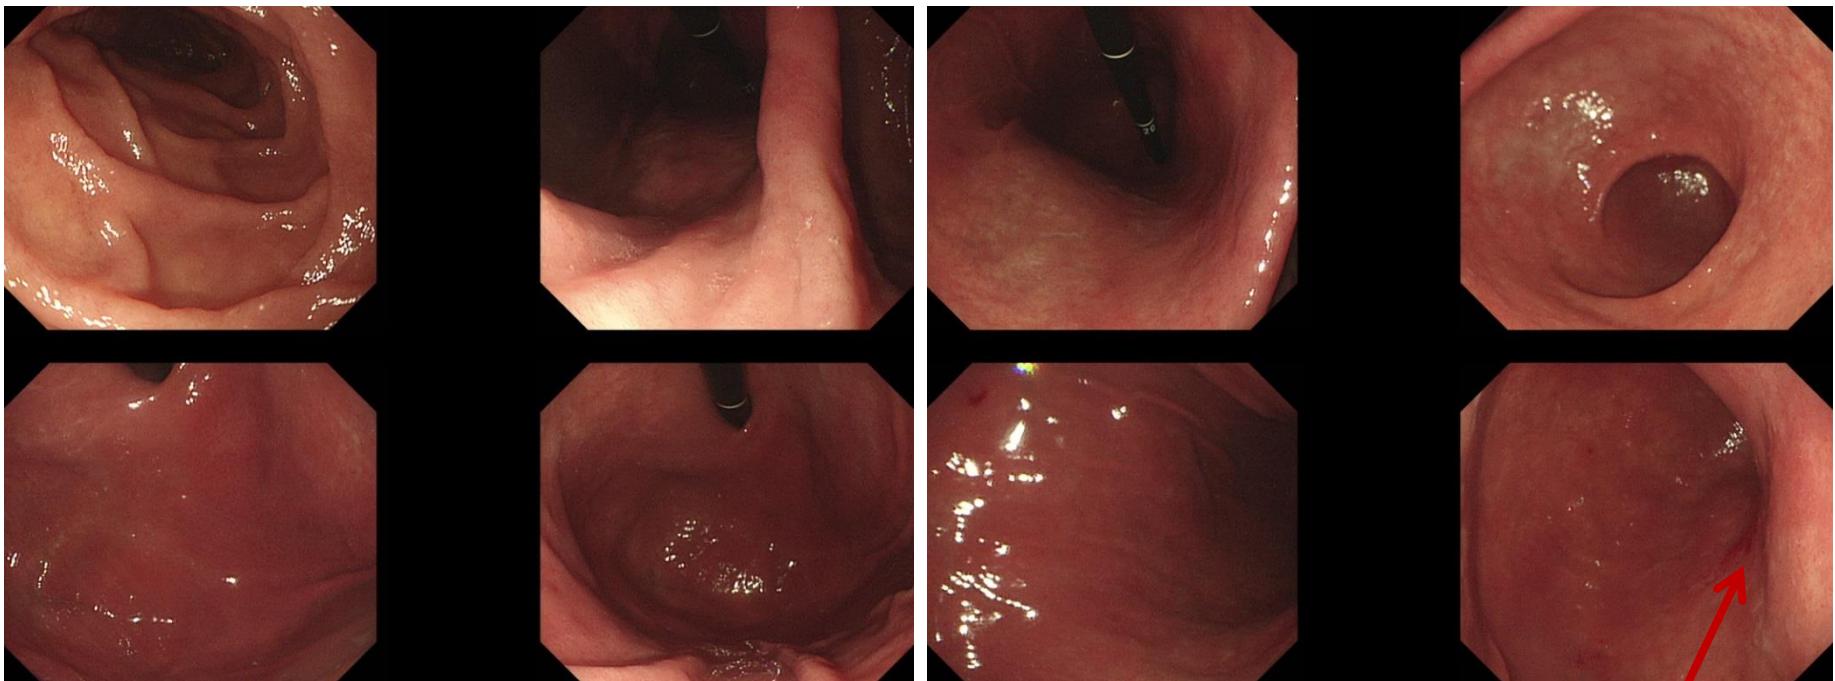

- 2016년 3월 17일 외래 방문: "Multiple erosion & submucosal lesions on body, 송기를 하여도 expansion 잘 안됨. Fundus에도 elongated mass 양상 Bx: CG with granulation tissue" 소견으로 의뢰됨
- 3월 17일. 당일 내시경 검사 시행. 이준행 교수가 오후 시술을 끝낸 후 내시경 결과를 확인하고 환자에게 연락하여 다음 날 외래로 오시게 함
- 3월 18일 외래에서 조직검사에서 암이 나오지 않더라도 수술이 필요한 상황임을 설명함. 당일 입원
- 3월 19일 외과 전과. Bx: 암 (-)
- 3월 20일 total gastrectomy

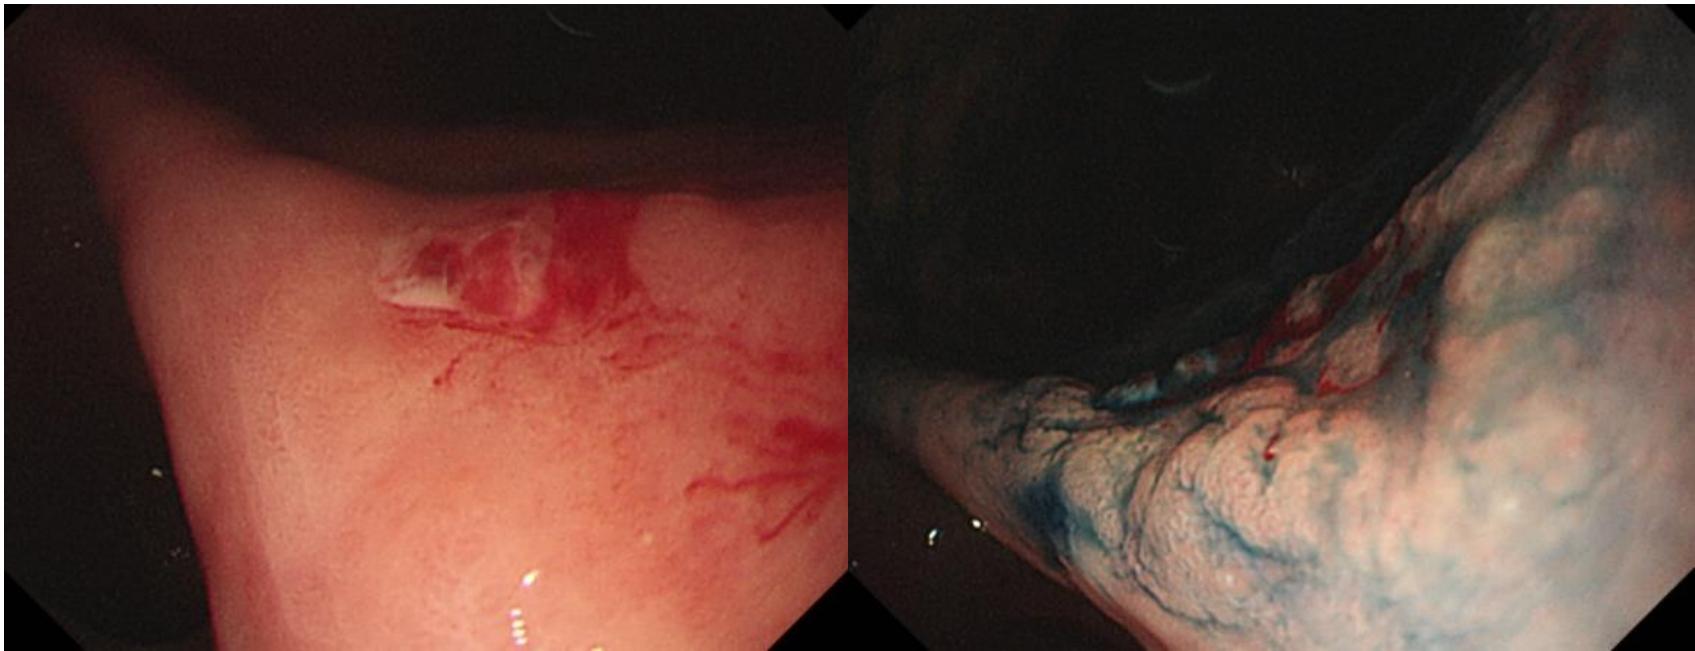

Case 2. EGC at blind area

성균관대학교 의과대학 내과 이준행

Something wrong is found at posterior wall aspect of the angle

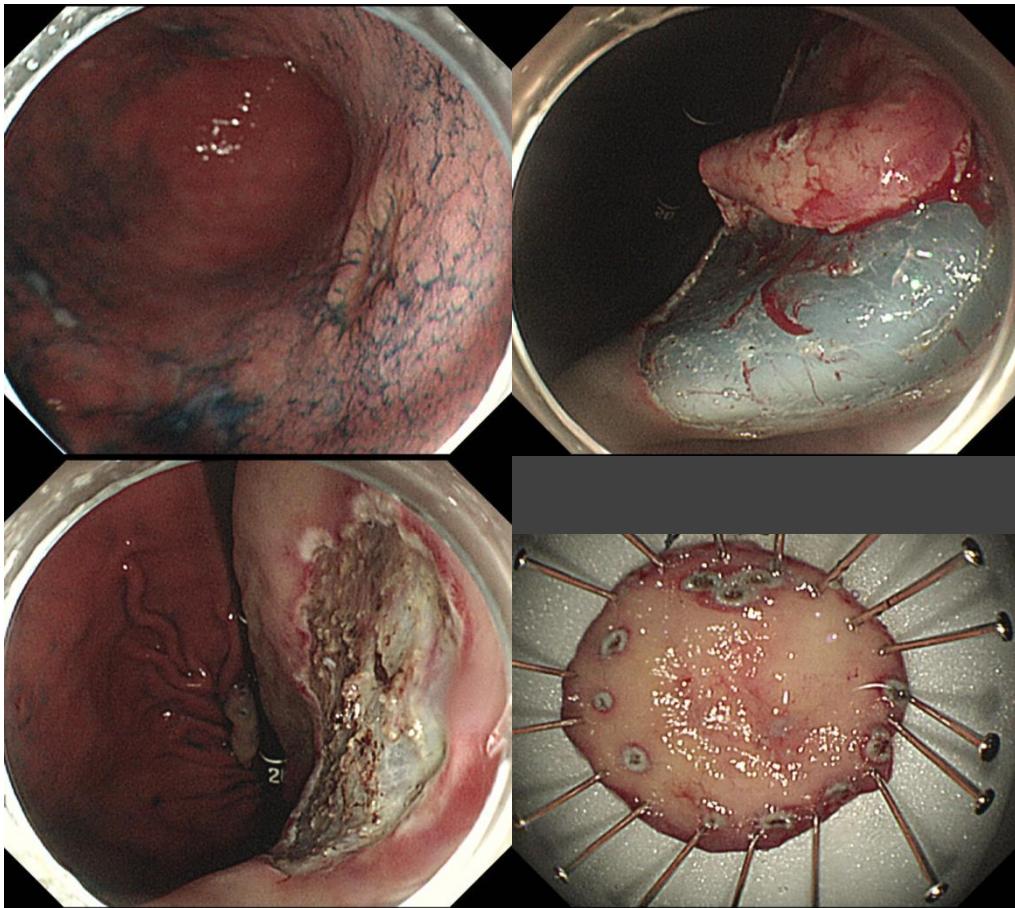

Initial biopsy: adenoma

■ STOMACH :

- ▷ EGC IIb + IIc. Chronic atrophic gastritis
#1x3(PW of angle)
 - Location : posterior wall of angle
 - Size : 1.8 x 1.6 cm
 - Diffuse mucosal atrophy was seen on the antrum and lesser curvature side of body.
위암 의심부위가 보여 indigocarmine spray를 이용하여 상세히 관찰하였음. 위각에서 위체하부 연결부 후벽에 1.8cm x 1.6cm 크기의 uneven surface를 보이는 ovoid lesion이 있으며 병소의 중앙에서 약간 소만쪽으로 약 0.5cm 크기의 deep erosion이 있음. 주변 점막의 화생성 변화가 현저하며 경계는 불명확함. Abnormal fold는 없음

ESD was done → 18mm W/D EGC (M)

**** 【최종보고】 ****

【판독의】 김경미

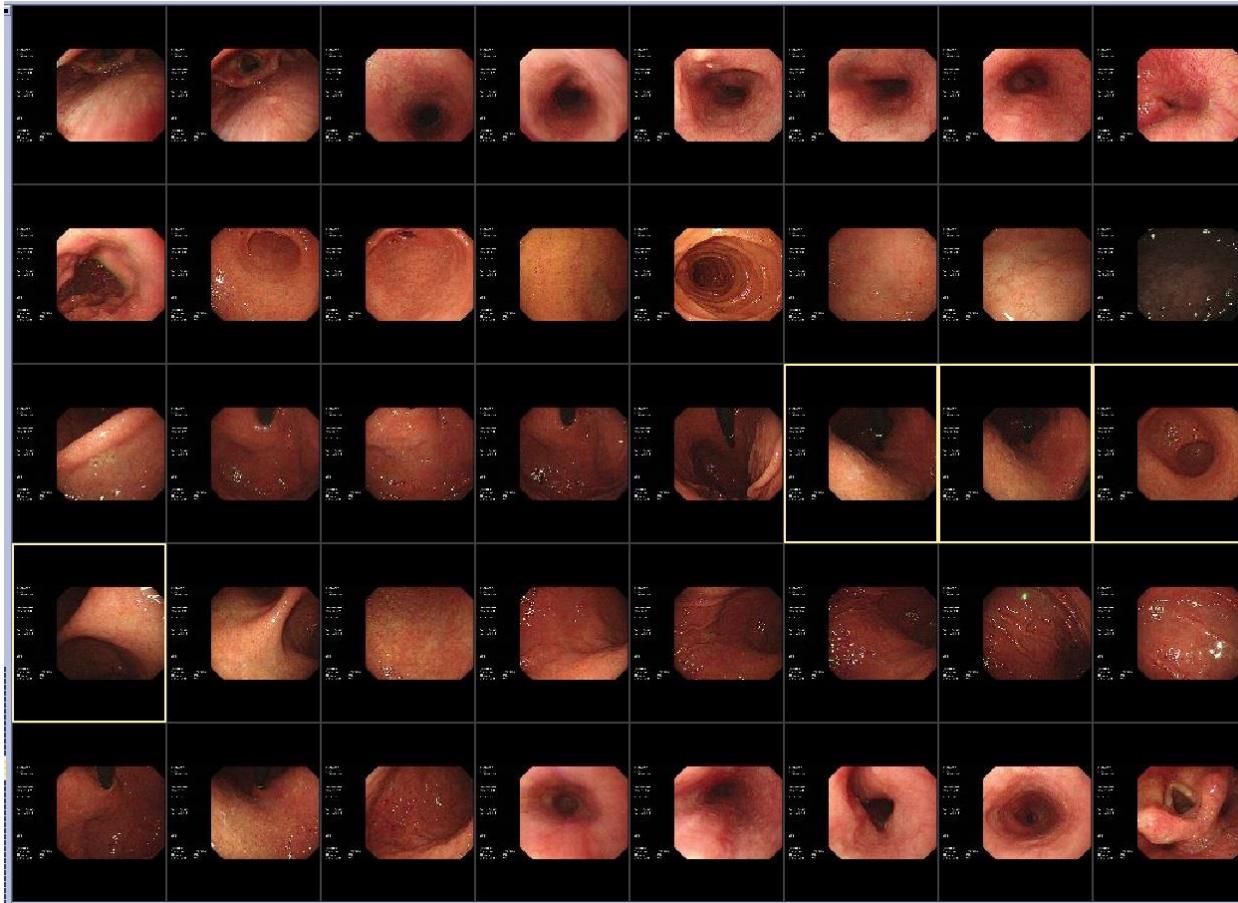

【검체】 Stomach 【병리번호】 [REDACTED]

결론 및 진단

1. Stomach, #1x1 : Posterior wall of low body, biopsy(ESD) :
 - . Early gastric carcinoma
1. Location : low body, posterior wall
2. Gross type : EGC type IIc
3. Histologic type : tubular adenocarcinoma, well differentiated
4. Histologic type by Lauren : intestinal
5. Size of carcinoma : (1) longest diameter, 18 mm (2) vertical diameter, 9 mm
6. Depth of invasion : invades mucosa (lamina propria) (pT1a)
7. Resection margin : free from carcinoma(N)
 - safety margin : distal 8 mm, proximal 9 mm, anterior 10 mm,
posterior 8 mm, deep 1800 μm
8. Lymphatic invasion : not identified(N)
9. Venous invasion : not identified(N)
10. Perineural invasion : not identified(N)
11. Microscopic ulcer : absent
12. Histologic heterogeneity: absent

(본 진단은 조직구축학적 검사 후 판독결과입니다.)

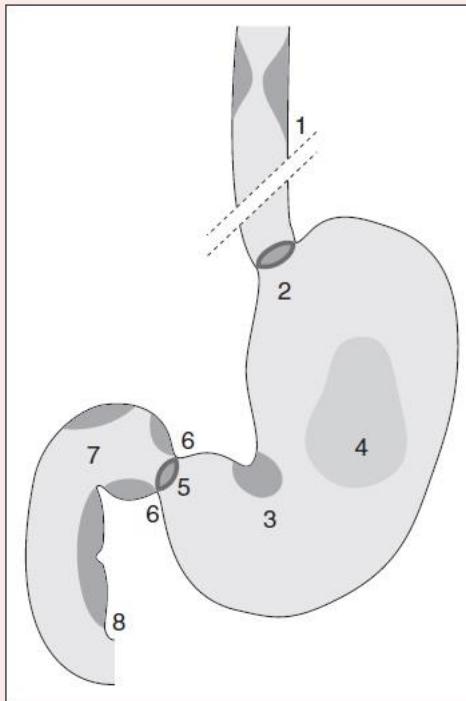

EGD 1 year ago

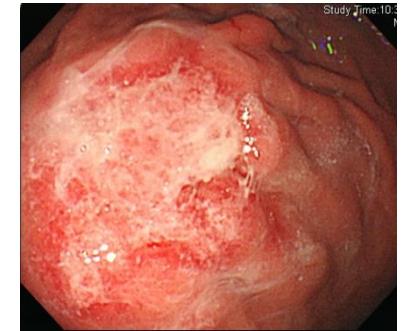

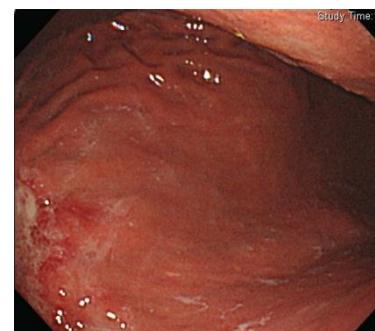

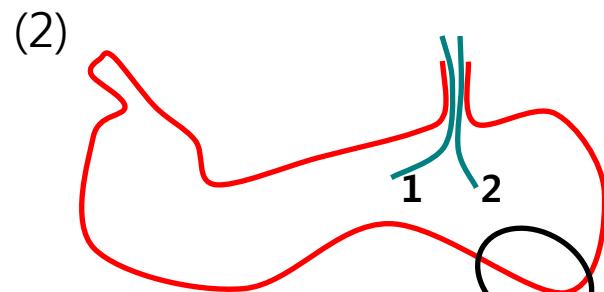

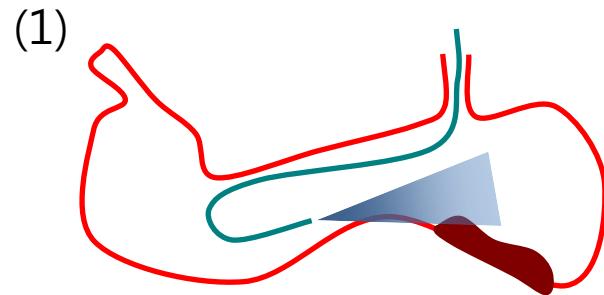

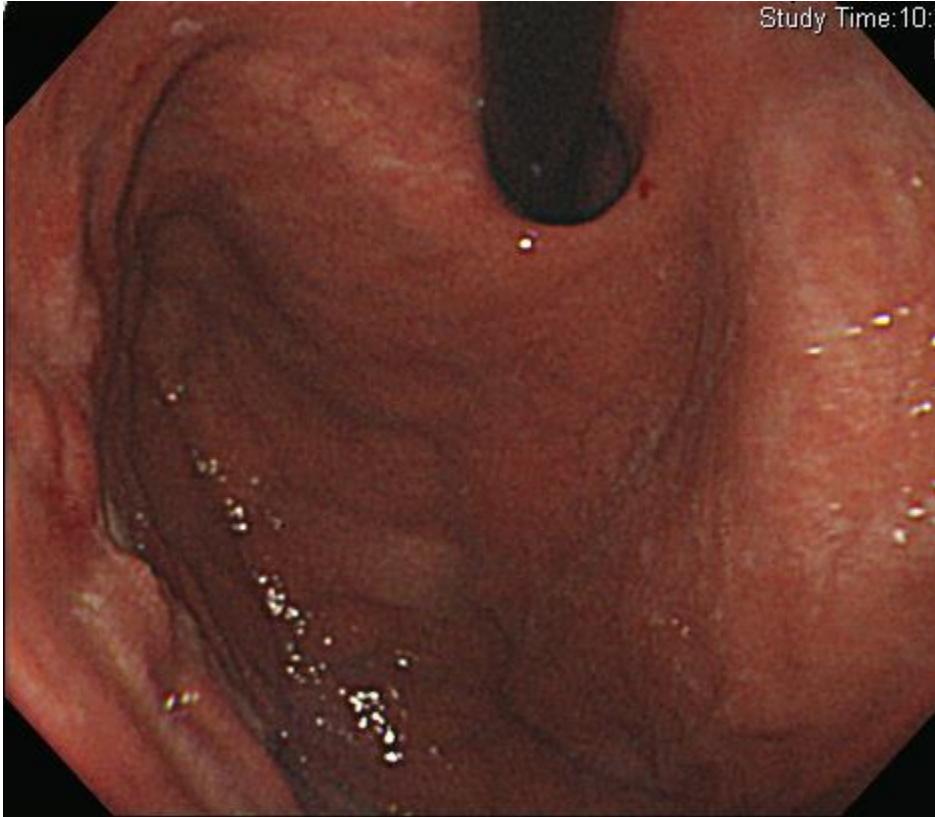

Blind area

The following areas may not be viewed clearly. They should be examined *carefully* by the endoscopist:

1. The cervical esophagus.
2. Cardia.
3. Incisura.
4. Posterior wall of the body.
5. Pylorus.
6. Immediate post-pyloric area of the duodenal bulb.
7. Superior flexure of the duodenum.
8. Medial wall of the second part of the duodenum.

GC side of the fundus – a blind spot

Good habit = good routine

Region	Area	Alpha Numeric Code
Pharynx	Hypopharynx	P1
Esophagus	Esophageal Upper Third	E2
	Esophageal Upper Third	E3
	Esophageal Upper Third	E4
	Esophageal hiatus	E5
Antrum	Pyloric ring	A6
	Antrum, Anterior Wall	A7
	Antrum, Lesser Curvature	A8
	Antrum, Posterior Wall	A9
	Antrum, Greater Curvature	A10
Stomach Body, Lower Third	Lower Third, Anterior wall	L11
	Lower third, Lesser Curvature	L12
	Lower Third, Anterior Wall	L13
	Lower Third, Greater Curvature	L14
Stomach Body, Middle Third	Middle Third, Anterior Wall	M15
	Middle Third, Lesser Curvature	M16
	Middle Third, Posterior Wall	M17
	Middle Third, Greater Curvature	M18
Stomach Body, Upper Third	Upper Third, Greater curvature	U19
	Upper Third, Anterior-Posterior wall	U20
	Fornix	U21
	Cardia	U22
Stomach Lesser Curvature	Lesser Curvature, Upper Third	Lc32
	Lesser Curvature, Middle Third	Lc24
	Lesser Curvature, Lower Third	Lc25
	Angulus	Lc26
Duodenum	Duodenal Bulb	D27
	Duodenum Second Portion	D28

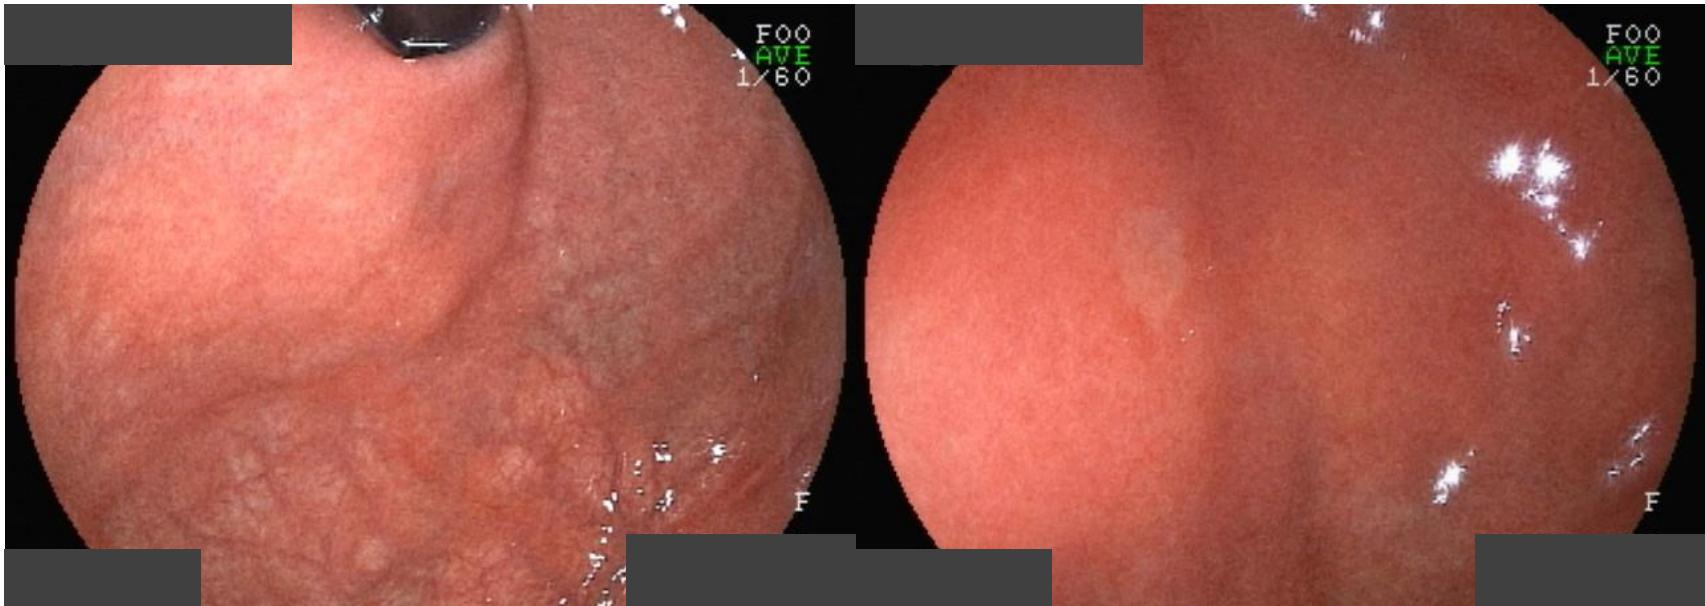

Some tips for finding EGC

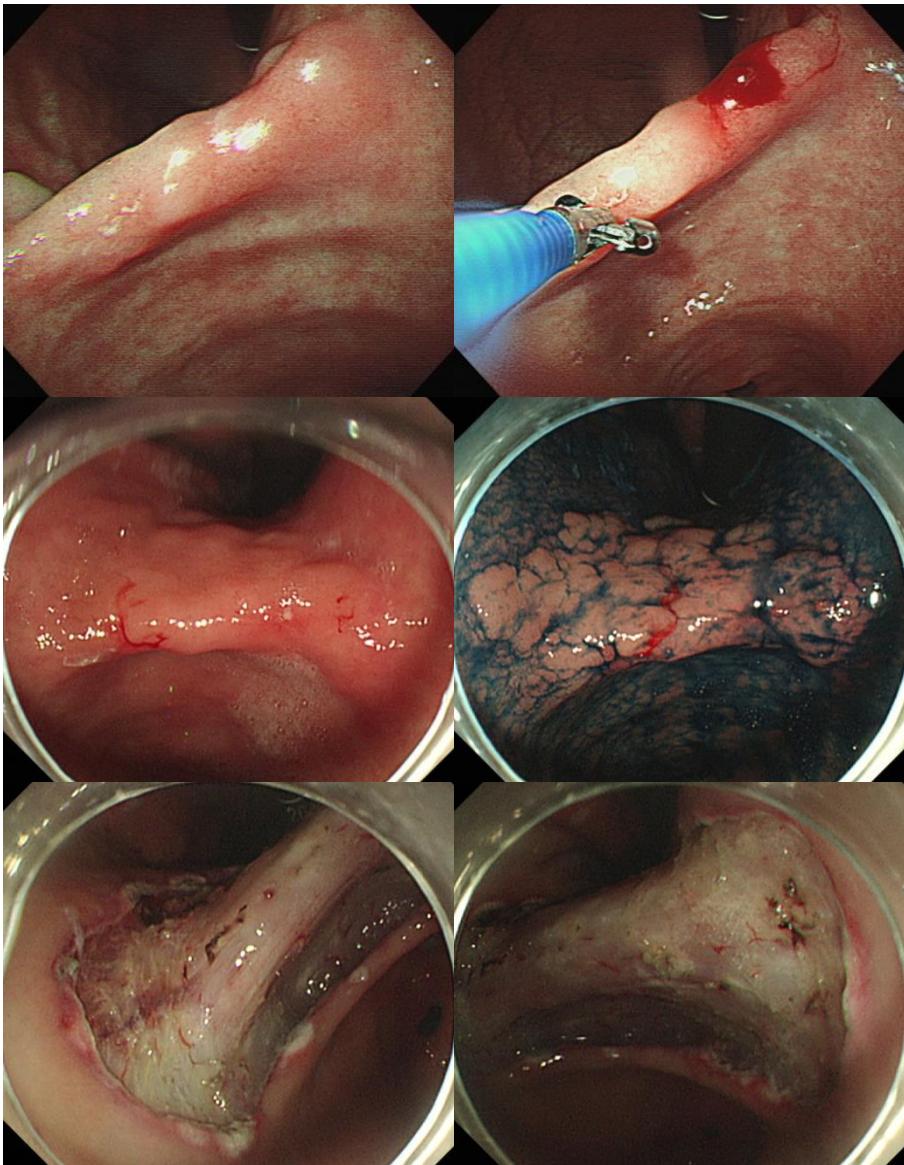

성균관대학교 의과대학 내과 이준행

Subtle color change

- P/D adenocarcinoma at fundus

It may be bigger than the first look.

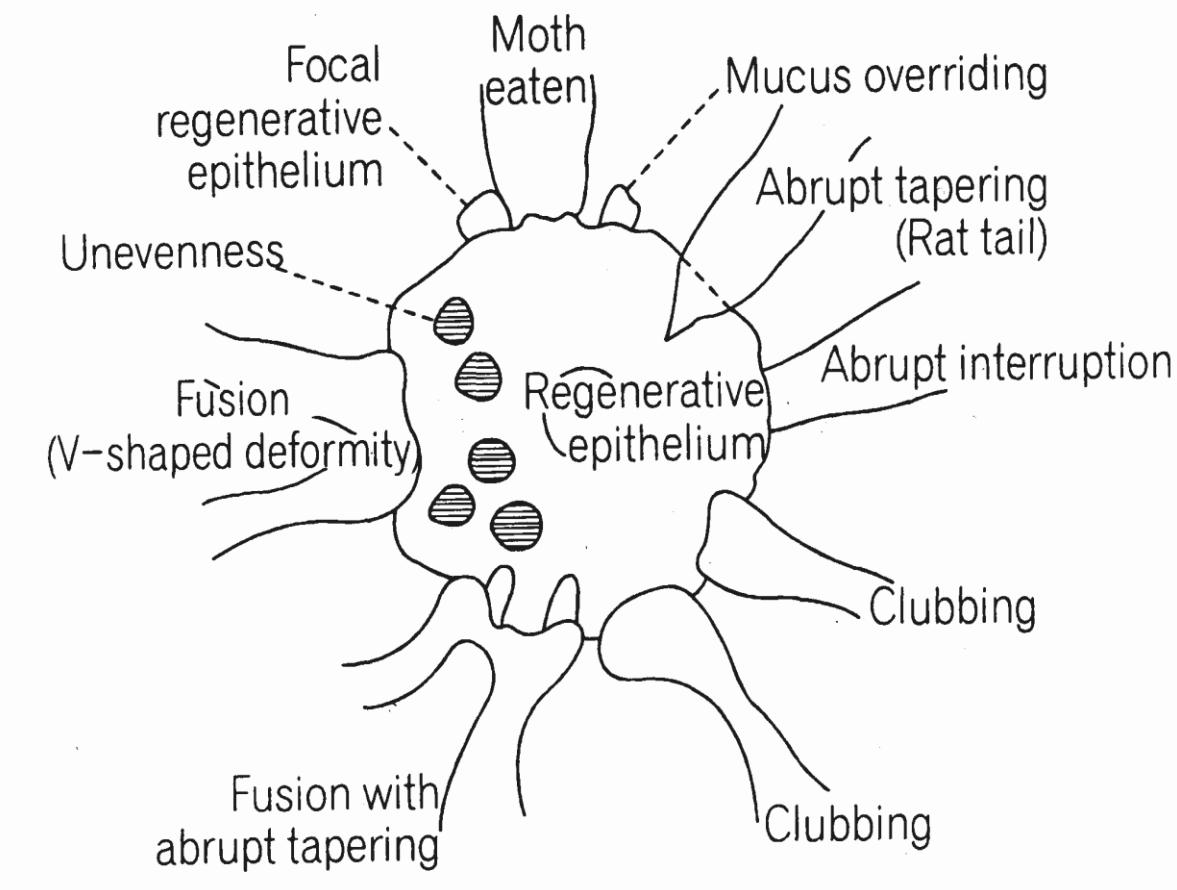

Two erosions

Left: adenoma with HGD

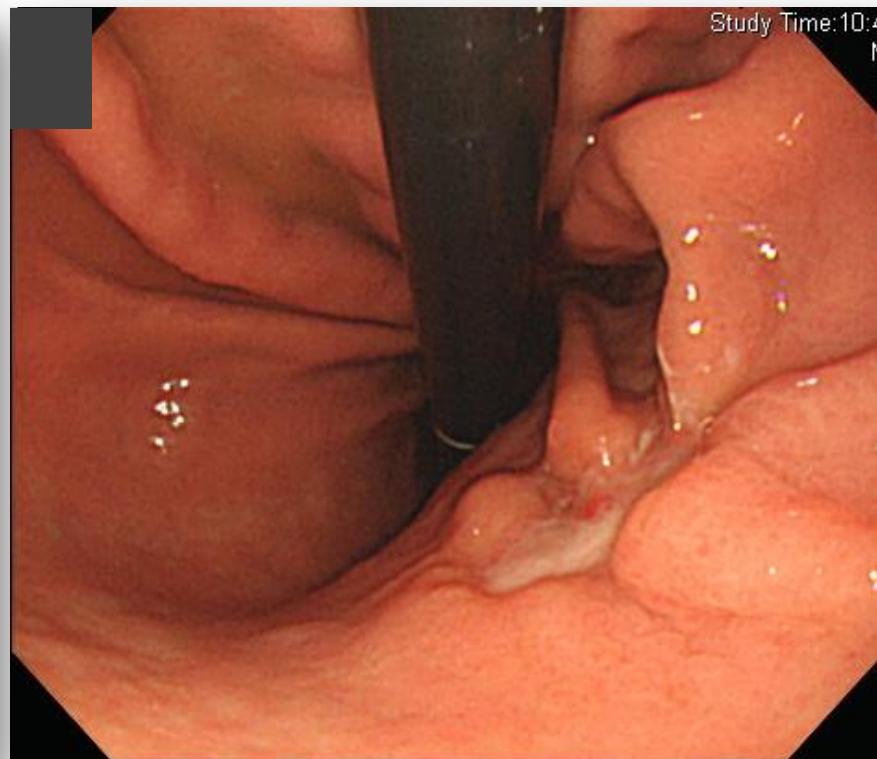

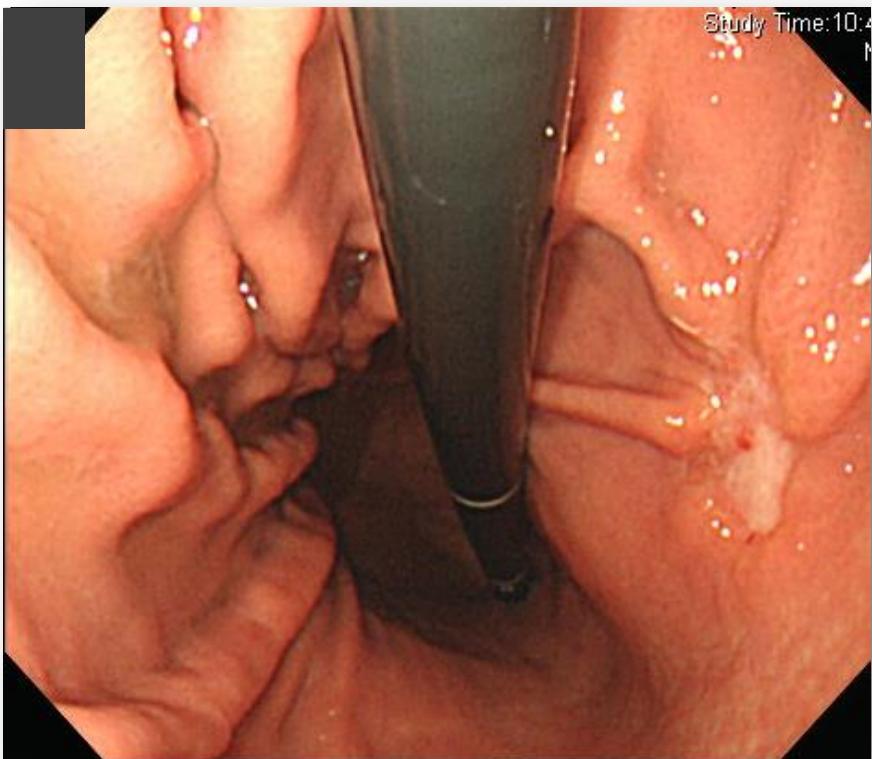

Right: W/D adenocarcinoma

ESD was done for a laterally spreading EGC. Final pathology was Tubular adenocarcinoma, well differentiated, arising from adenoma

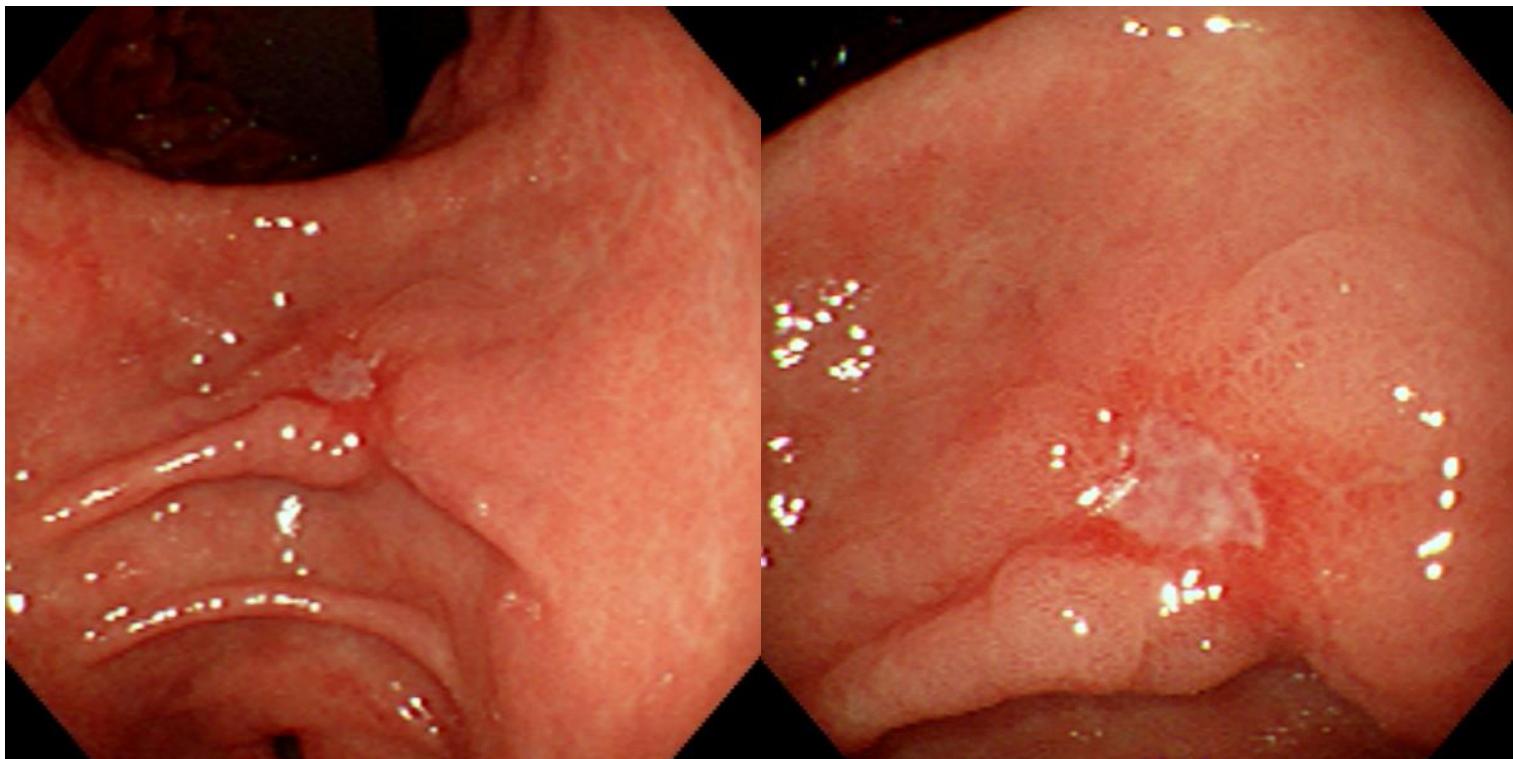

Fold changes and others

Typical fold changes of EGC (1)

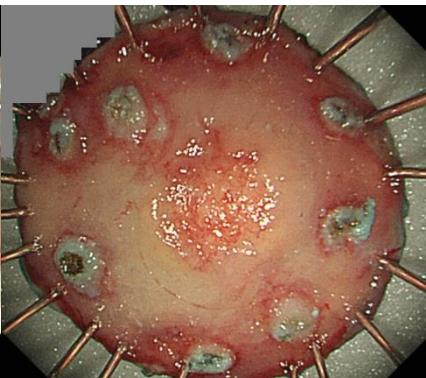

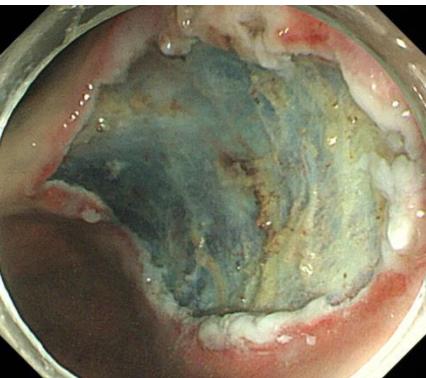

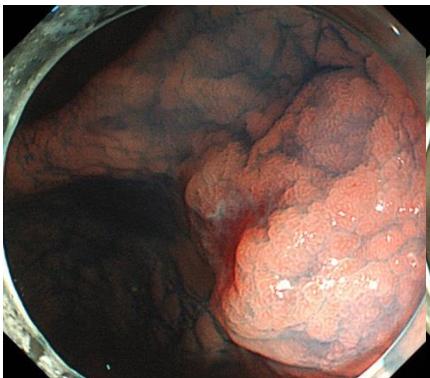

Typical fold changes of EGC (2)

Case 3. – Atypia / atypical glands

성균관대학교 의과대학 내과 이준행

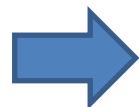

Atypia at previous endoscopy

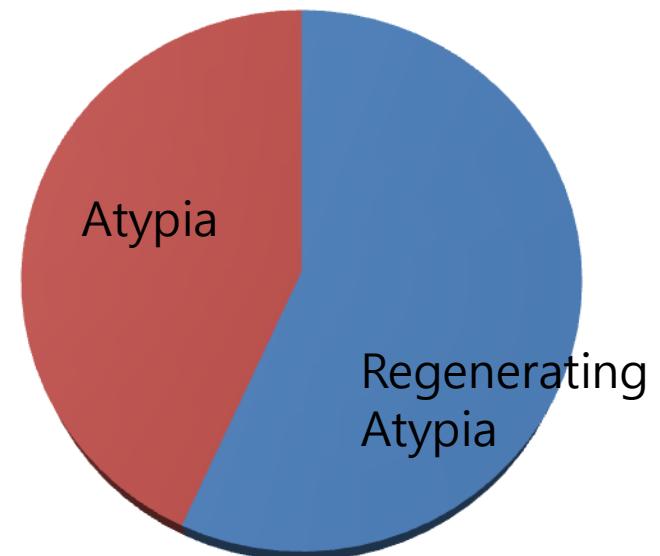

Papillary adenoca (M/D)
7 x 6 mm
Resection margin (-)
SM invasion : 1900 μm
Venous invasion : present

Atypia at biopsy (2004-2010, SMCHPC)

a few atypical gland (reactive regenerating gland)
atypical regenerative epithelium
atypical foveolar glands (regenerating)
atypical gland (regenerating atypia)
atypical gland (reactive regenerating atypia)
atypical glands (reactive change of regenerating gland)
atypical regenerating glands
atypical regenerative foveolar epithelium
focal atypical cells (reactive regenerating atypia)
atypical glands (regenerating atypia)
focal atypical glands (reactive change)
focal atypical glands (regenerating atypia)
focal regenerating atypia
regenerating atypia
regenerating epithelial atypia
focal atypical glands (regenerating atypia)
focal atypical glands (regenerating gland)
focal atypical regenerative glands
regenerative atypia
regenerating foveolar epithelium with mild atypia
regenerative foveolar epithelium with moderate atypia

**Regenerating Atypia
(n=71, 57%)**

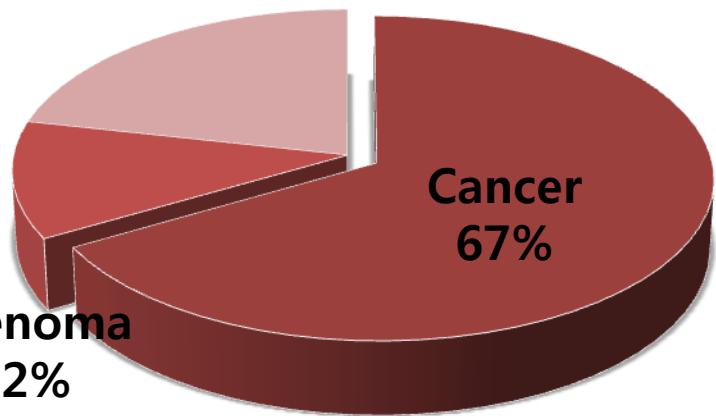

Atypical cell / glands

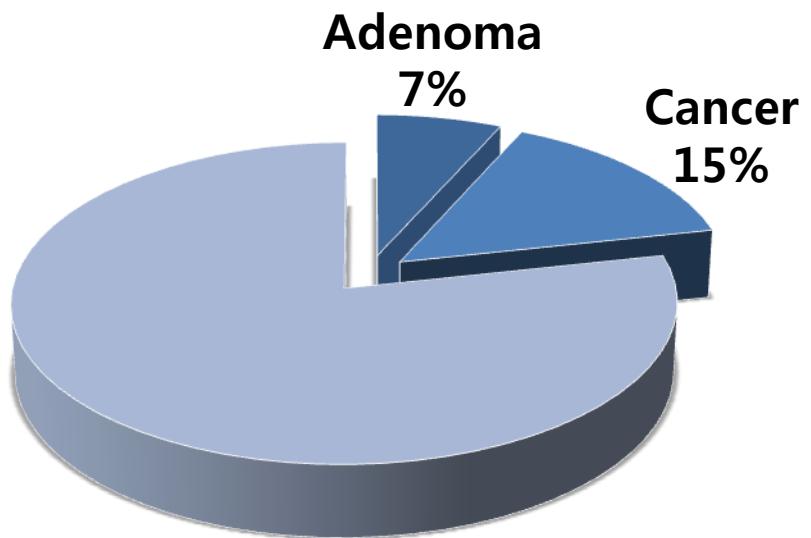

Atypia (n=54, 43%)

Final pathological diagnosis

Atypia

Regenerating Atypia

Adenoma
12%

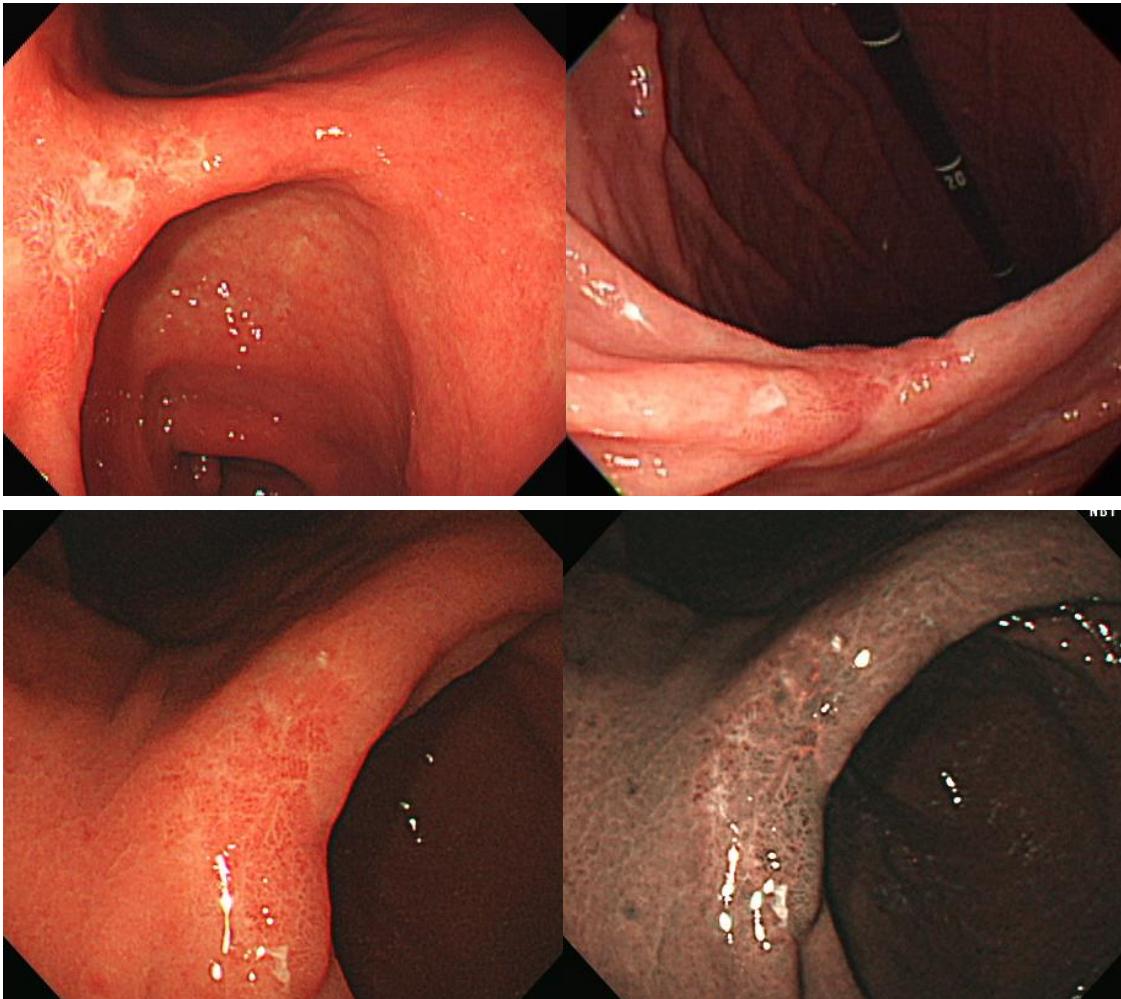

Cancer
67%

Mean follow-up (day)
 351.02 ± 532.53
(range 11~2600)

Mean follow-up (day)
 1153.15 ± 805.04
(range 49~3191)

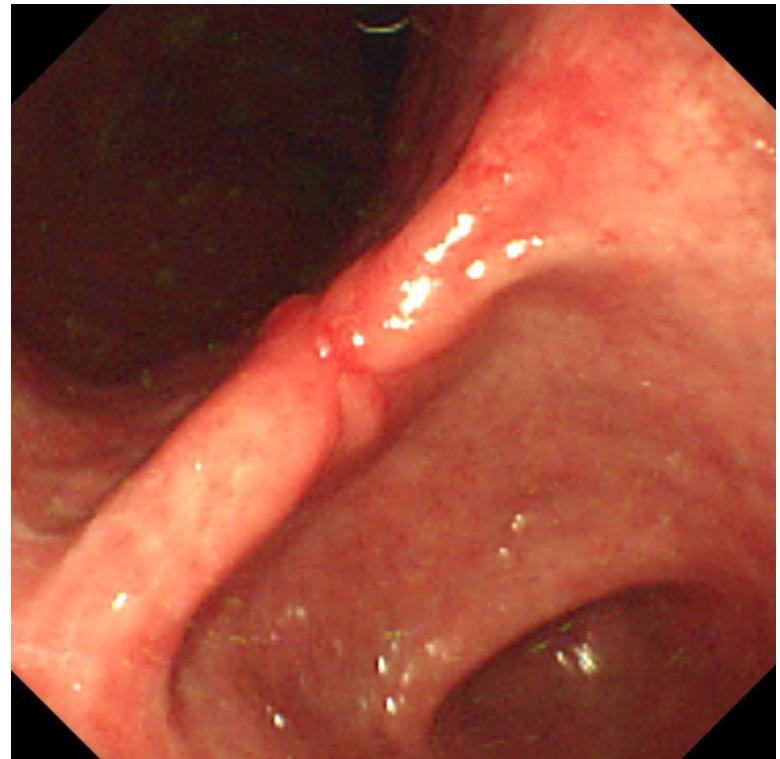

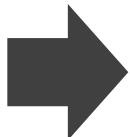

Atypical glands

→ Repeated biopsy after referral: P/D

Atypical cells

→ Repeated biopsy after referral: M/D

비록 많이 좋아져 보이지만 이번 조직
검사에서도 암으로 나왔습니다.

Early gastric carcinoma

1. Location : lower third, center at body and lesser curvature
2. Gross type : EGC type IIc and IIa
3. Histologic type : tubular adenocarcinoma, moderately differentiated
4. Histologic type by Lauren : intestinal
5. **Size : 3.9x2.5 cm**
6. Depth of invasion : invades mucosa (**muscularis mucosae**) (pT1a)
7. Resection margin: free from carcinoma
safety margin: proximal 3.5 cm, distal 6.3 cm
8. LN: no metastasis in 65 regional lymph nodes (pN0)
9. Lymphatic invasion : not identified
10. Venous invasion : not identified
11. Perineural invasion : not identified
12. AJCC stage by 7th edition: pT1a N0

Endoscopy for gastric cancer

- Take home messages

- Let's start with **Boxim** (box simulator training) and **DEX** (description exercise)
- Borrmann type IV is the most important disease.
- Be careful about blind areas.
- Interpretation of biopsy result is important, especially for atypia and atypical glands.
